

Sneha Anumandla

Florida, USA | (561) 589-9622 | anumandlasneha786@gmail.com | [Linkedin](#)

SUMMARY

- Strategic Data Analyst with 5 years of experience in financial analytics, fraud monitoring, data engineering, and business intelligence across banking, technology, and consulting domains.
- Built scalable data architectures and automated ETL pipelines using AWS, Azure, PySpark, and Snowflake to support fraud detection, regulatory reporting, and enterprise-wide analytics.
- Developed machine learning and forecasting models in Python, SQL, and R to enhance credit risk assessment, fraud detection, compliance monitoring, and portfolio optimization.
- Delivered interactive Tableau and Power BI dashboards and governed enterprise data models that strengthen decision-making, audit readiness, and operational transparency across high-volume transactional systems.
- Proficient in Microsoft Office Suite (Excel, Word, PowerPoint) to support financial analysis, fraud reporting, and business documentation.

PROFESSIONAL EXPERIENCE

Data Analyst | JP Morgan Chase & Co. | USA

Jul 2025 – Current

- Built and maintained Tableau dashboards using 15M+ transactional records to monitor fraud patterns across cards, deposits, and digital channels.
- Automated fraud-alert documentation with Python + SQL, reducing manual reporting effort for the Fraud Monitoring Team by 40%.
- Developed and optimized complex SQL and PySpark queries on Hadoop and Oracle systems to extract and analyze high-volume fraud datasets.
- Delivered rapid, ad-hoc fraud monitoring solutions during emerging threat scenarios, ensuring timely escalation and decision support for risk partners.
- Designed end-to-end workflows with strong data-quality controls, ensuring accurate, scalable, and audit-ready fraud reporting across multiple banking products.

Data Analyst | Indusind Bank Limited | India

May 2021 – May 2022

- Automated KPI and loan-origination dashboards using SQL and Power BI, improving turnaround time and eliminating 150+ hours of manual reporting tasks across SME and PSU lending portfolios.
- Architected enterprise-grade data models (Star Schema / OLAP) to support accurate portfolio analytics and enhance data quality controls within credit and trade finance operations.
- Evaluated commercial lending datasets using Python and SQL Server to identify process gaps and accelerate loan-disbursement decisions, improving operational efficiency for institutional and SME clients.
- Optimized CRM workflows by integrating analytics from AWS RDS and Power BI, strengthening cross-department coordination and reducing approval delays across the corporate loan pipeline.
- Developed financial risk models using regression and predictive analytics, improving early-warning detection for non-performing assets and supporting stronger compliance reporting.
- Facilitated Agile ceremonies and stakeholder alignment sessions, coordinating end-to-end process-automation initiatives that improved visibility, reporting accuracy, and execution.
- Utilized Excel and Microsoft Office tools to automate reporting, track KPIs, and enhance process documentation across lending operations.

Data Analyst | KPMG | India

Sep 2017 – Apr 2021

- Designed and maintained interactive Tableau dashboards connected to Snowflake, Oracle, and SQL Server to monitor financial anomalies and high-risk activity, reducing audit and fraud-monitoring turnaround time by 10+ business days.
- Architected automated ETL workflows using AWS Glue, Airflow, and Spark, including email-based alerting and documentation automation that replaced manual fraud-review processes and saved 200+ hours annually.
- Wrote and optimized complex SQL and PySpark queries across Hadoop, Oracle, and Snowflake to extract, transform, and analyze large-scale transactional datasets supporting fraud detection and risk-control reporting.
- Collaborated closely with finance, audit, and risk stakeholders to translate monitoring needs into actionable data solutions, delivering rapid, high-accuracy outputs during urgent or emerging fraud scenarios.
- Implemented end-to-end anomaly detection workflows using TensorFlow and PySpark, identifying suspicious patterns and strengthening internal controls across key areas such as digital transactions, account activity, and payment behavior.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (S3, Lambda, EC2, RDS, Glue), Azure (Data Factory, Synapse, Databricks)
- **Big Data & Distributed Systems:** Apache Spark, Hadoop, Hive, Kafka (Streams, Connect), Databricks, Airflow, Cloudera CDH
- **Databases & Data Warehousing:** MySQL, SQL Server, Oracle, DynamoDB, MongoDB, Data Warehouse Concepts (ETL, OLAP, OLTP), Snowflake
- **Programming & Scripting:** Python (NumPy, Pandas, Matplotlib, Scikit-Learn, TensorFlow, PySpark, PyTorch), SQL (T-SQL, HiveQL), Java, R, HTML, CSS
- **Machine Learning & AI:** Supervised & Unsupervised Learning, Linear & Logistic Regression, Decision Trees, Random Forest, SVM, K-NN, Naïve Bayes, Bagging & Boosting, K-Means Clustering, Neural Networks, Deep Learning, Predictive & Statistical Modeling
- **Forecasting & Time Series Analysis:** ARIMA, Exponential Smoothing, Regression Analysis, Moving Average

- **Data Visualization & Reporting:** Tableau, Power BI, Matplotlib, Seaborn
- **Data Modeling & Architecture:** Star Schema, Snowflake Schema, Dimensional Modeling
- **Methodologies:** Agile, Scrum, Kanban, CI/CD Practices
- **Domain Expertise:** Financial Reporting, Risk & Regulatory Compliance, Process Optimization, Stakeholder Management, Banking & Financial Products, Commercial & Corporate Banking, Supply Chain Analytics

EDUCATION

University of New Haven USA Master of Science in Business Analytics	<i>Aug 2023 – Mar 2025</i>
JNTU University India Bachelor of Technology in Computer Science	<i>Apr 2013 – Jun 2017</i>

RESEARCH & PROJECTS

Research Contributor – Supply Hubs Integrated Emergency Logistics Delivery (SHIELD): An AI-Powered Emergency Response Framework for NPOs

- Co-authored a research paper presented at the **NEDSI-2025 Conference**, focusing on **Generative AI for Supply Chain Resilience**. Designed the SHIELD framework—an **AI-driven logistics solution** integrating **real-time analytics and predictive modeling (Python, XGBoost)** to strengthen disaster response and resource allocation for NPOs across Florida.
- Built an interactive **Tableau dashboard integrated with Python models** to identify high-risk counties, forecast inventory requirements, and optimize distribution routes, improving coordination, supply visibility, and response efficiency in humanitarian logistics.

Port Authority of New York and New Jersey – Passenger & Bus Forecasting

- Built and validated advanced forecasting models (ARIMA, Regression, Deep Neural Networks, Auto Regressive) in **R, Python, and Power BI**, integrating seasonal and cyclical factors such as temperature, gas price, and major events to enhance prediction accuracy.
- Enhanced data integrity by resolving missing values and constructing time-series dashboards in **Power BI**, delivering actionable insights that supported long-term transportation planning and resource optimization.

Fleetcor – Cross-Sell Programs Account Monitoring

- Assessed the performance of multiple cross-sell initiatives using **SQL Server, SSIS, R, Python, Power BI, and Tableau**, identifying behavioral patterns that differentiated customers with and without program participation.
- Applied analytical models including **CHAID, Decision Trees, Logistic Regression, and Linear Regression** to uncover key drivers influencing conversion trends and recommended strategies for program efficiency improvement.

Micro-Mortgage Analytics – Loan Sanction Prediction

- Designed and evaluated predictive models using **Logistic Regression, Decision Tree, and Random Forest** to assess creditworthiness for informal-sector borrowers, streamlining the loan origination and approval workflow.
- Visualized insights in **Tableau and R** to highlight operational bottlenecks and deliver recommendations that improved financial accessibility and reduced assessment overhead for Shubham Housing Development Finance Company.

CERTIFICATION

- [Google Business Intelligence](#)
- [Microsoft Power BI Data Analyst](#)
- [Microsoft Azure Data Fundamentals](#)
- [Coursera Business Analysis & Process Management](#)

Honors & Awards

- **Gold Medal for Excellence in Business Analytics, University of New Haven** — Recognized for outstanding academic and analytical performance; **Top 20% of graduate business students globally**.
- **Lifetime Member, Beta Gamma Sigma Honor Society** — Inducted **April 2025** for academic excellence in business education.
- **Junior Associate of Indian Institute of Banking and Finance (JAIIB)** — Awarded by **IIBF**, the premier professional body for banking and financial professionals in India (**Dec 2019 – Present**).
