SENIOR DATA ANALYST

PROFESSIONAL SUMMARY:

- Over 9+ years of experience in Data Analysis, adept at leveraging tools like SQL, Power BI, and Excel for advanced Business Intelligence.
- Analyzed complex datasets using SQL and PostgreSQL, delivering critical insights that enhanced business decision-making processes.
- Developed and maintained advanced data visualizations and reporting tools using Power BI and QlikView, improving user engagement and data understanding.
- Utilized Apache Hadoop to manage and analyze large-scale data volumes, enabling efficient data processing and storage solutions.
- Implemented robust ETL workflows using SSIS and Oracle Data Integrator (ODI), streamlining data cleansing and transformation processes.
- Managed real-time data processing systems using Apache NiFi and Kafka, ensuring timely data availability for analytics.
- Conducted detailed statistical analysis using MATLAB and Matplotlib, identifying significant patterns for strategic initiatives.
- Designed interactive dashboards with Power BI and Qlik Sense, enhancing data interactivity and business accessibility.
- Leveraged Microsoft Excel for complex data analysis, utilizing advanced functions to generate comprehensive reports and insights.
- Engineered data integrations across diverse systems and databases using Informatica, improving data consistency and integrity.
- Optimized data workflows and analytics capabilities using Azure Stream Analytics and Azure SQL, supporting real-time BI solutions.
- Performed competitive analysis and market research in the *healthcare sector* using SPSS and Qualtrics, informing strategic decisions.
- Enhanced CRM data integration and analytics using Adobe Analytics, improving marketing strategies and customer engagement.
- Managed cloud-based data storage and analysis using AWS QuickSight and AWS S3, optimizing data accessibility and scalability.
- Oversaw database management and query optimization using SQL, improving system performance and data retrieval speed.
- Facilitated project management and documentation using JIRA and Confluence, strengthening team collaboration and project tracking.
- Mapped business processes and technical workflows using Lucidchart and Microsoft Visio, creating clear, actionable diagrams.
- Applied BPMN methodologies using Lucidchart for business process modeling, enhancing process efficiency.
- Established documentation and data governance frameworks, supporting compliance, reporting, and strategic decision-making.
- Ensured compliance with data privacy and security standards across multiple platforms, maintaining data integrity and confidentiality.
- Mastered Agile/Scrum methodologies, leading teams to deliver high-quality outcomes within defined timelines.
- Administered version control using Git, improving code management and team collaboration.
- Used Microsoft Teams to streamline communication and collaboration across project teams, enhancing coordination and workflow efficiency.
- Developed banking solutions at BNY Mellon using SQL and Excel, focusing on customer service improvement and operational efficiency.
- Translated complex data findings into actionable insights for stakeholders using PowerPoint, improving strategic planning and execution.

- Led and executed data-driven projects from inception to completion, ensuring alignment with business objectives and stakeholder needs.

TECHNICAL SKILLS:

Skill Category	Technologies/Tools
Database Management	PostgreSQL, SQL, Microsoft SQL, Azure SQL
Data Analysis Tools	Microsoft Excel, SPSS, Python, R
Visualization Tools	Power BI, QlikView, Tableau, Looker, Qlik Sense
Big Data Technologies	Apache Hadoop, Apache Spark, Kafka, Azure Data Lake
ETL Tools	Informatica, SSIS, Apache NiFi, Oracle Data Integrator, Azure Data Factory
Project Management	JIRA, Confluence, Microsoft Teams, Agile/Scrum
Documentation Tools	Microsoft Visio, Lucid Chart, PowerPoint, Excel
Version Control	GIT

PROFESSIONAL EXPERIENCE:

Client: Lincoln Financial Group, Greensboro, NC

Jan 2024 to till date

Role: Senior Data Analyst

Roles & Responsibilities:

- Analyzed business requirements to create precise technical specifications, leveraging SQL and Excel to strengthen data-driven decision-making.
- Designed, developed, and validated analytics solutions using Power BI and SharePoint, ensuring effective data presentation and seamless team collaboration.
- Led Agile/Scrum ceremonies, capturing decisions and outcomes in Confluence, ensuring full transparency and alignment across project teams.
- Streamlined business processes using BPMN, creating clear workflow diagrams in Lucidchart that improved operational efficiency and process clarity.
- Created detailed stakeholder reports using Microsoft Visio and PowerPoint, ensuring clear communication of project status, risks, and deliverables.
- Managed project deliverables and timelines using JIRA, ensuring all initiatives were completed on time and met organizational objectives.
- Facilitated cross-functional communication using Microsoft Teams, improving coordination and accelerating issue resolution.
- Ensured strong data governance and integrity by performing rigorous testing and validation, using SharePoint for secure documentation management.
- Translated complex data sets into actionable insights using Excel and Power BI, supporting executive-level strategic decision-making.
- Developed user-friendly Power BI dashboards, enabling non-technical users to access and interpret key business metrics with ease.
- Optimized database efficiency by refining SQL queries, significantly improving data retrieval times and overall system performance.
- Conducted technical training sessions to upskill team members on new tools and technologies, improving team capability and productivity.
- Monitored and remediated workflow issues using Excel and JIRA, ensuring consistent and reliable data processes.
- Performed data validation and system testing using SQL and Excel to guarantee the accuracy and operational effectiveness of new solutions.
- Collaborated with IT and business stakeholders to define technical enhancements, presenting solutions using Lucidchart and PowerPoint.
- Maintained thorough project documentation in Confluence, providing reliable reference points for audits, knowledge transfer, and continuity.

- Developed strategic enhancements for banking applications, aligning technical solutions with business goals using JIRA and Microsoft Visio.
- Improved system functionality by implementing solutions that integrated smoothly with existing platforms, using BPMN and Lucidchart.
- Optimized project management workflows with Agile methodologies, utilizing JIRA and Confluence to track tasks, issues, and progress.
- Ensured compliance with data governance standards, managing secure data sharing and collaboration through SharePoint and Microsoft Teams.
- Led project meetings and facilitated discussions, using Microsoft Teams to align stakeholders and resolve issues efficiently.
- Provided technical troubleshooting for data quality issues, utilizing SQL and Excel to diagnose root causes and implement corrective actions.
- Developed and maintained robust data models and databases using SQL, ensuring scalable and reliable data architecture.
- Delivered end-user training on newly implemented systems using PowerPoint and Excel, improving adoption and user competency.
- Oversaw migration of legacy systems to modern platforms, ensuring seamless data integration and functionality through SQL and BPMN workflows.

Environment: SQL, JIRA, Excel, Confluence, Teams, SharePoint, PowerPoint, Power BI, Lucidchart, BPMN, Microsoft Teams.

Client: Optum RX, Costa Mesa, CA

Aug 2021 to Dec 2023

Role: Data Analyst

Roles & Responsibilities:

- Performed advanced data analysis using SQL and Python, improving healthcare outcomes through optimized data processes and clinical insights.
- Integrated data from diverse source systems using Informatica and other ETL tools, creating a unified and reliable data environment for comprehensive healthcare analytics.
- Developed impactful clinical visualizations using Tableau and Looker, enabling healthcare professionals to interpret patient and operational data more effectively.
- Analyzed competitive healthcare market trends using SPSS and Excel, delivering strategic insights that strengthened the company's market positioning.
- Managed CRM data integration using Adobe Analytics and internal systems, enhancing data accuracy, patient profiles, and customer engagement.
- Ensured compliance with healthcare data security regulations, coordinating with IT teams and utilizing Linux and Git for system management and version control.
- Maintained detailed documentation of analytical processes in Confluence, supporting transparency, reproducibility, and audit readiness.
- Utilized AWS QuickSight and AWS S3 to manage and analyze healthcare datasets, improving cloud-based analytics performance and scalability.
- Conducted research and competitive analysis using Qualtrics, deepening the understanding of patient needs and healthcare market dynamics.
- Integrated Experian data with internal databases using SQL and Excel, improving patient demographic accuracy and enhancing segmentation models.
- Developed and maintained advanced analytics models using Python, supporting clinical decision-making and operational optimization.
- Transferred sensitive healthcare data securely using FTP/SFTP, ensuring data integrity, compliance, and confidentiality.
- Configured and maintained API connections using RESTful services, enabling seamless and secure data exchange between healthcare systems.

- Performed data cleansing and transformation using Oracle Data Integrator (ODI) and Informatica, ensuring the highest-quality data for healthcare applications.
- Automated repetitive workflows using Apache NiFi, improving efficiency and reducing manual errors in healthcare data pipelines.
- Monitored real-time data flows using Kafka, ensuring timely availability of critical healthcare data for urgent analytics.
- Analyzed patient satisfaction and clinical outcomes using Tableau dashboards, providing actionable insights to improve patient care.
- Facilitated collaboration and project tracking using Microsoft Teams and JIRA, improving team productivity and healthcare project delivery.
- Developed predictive models using SPSS, significantly enhancing patient care efficiency and forecasting healthcare utilization.
- Implemented data governance protocols using SharePoint, ensuring compliance with healthcare data privacy and regulatory standards (HIPAA-ready).
- Delivered technical training on analytics tools using PowerPoint and Excel, ensuring successful adoption by healthcare staff.
- Optimized healthcare data storage using Azure SQL and Data Warehouse solutions, improving scalability, performance, and data security.
- Collaborated with cross-functional healthcare teams to implement new technologies and systems, documenting workflows and architectures using Lucidchart.

Environment: SQL, Microsoft SQL Server, SPSS, Tableau, AWS QuickSight, Python, CRM, Adobe Analytics.

Client: Object Computing, St. Louis, MO.

Dec 2019 to Jul 2021

Role: Data Visualization Specialist

Roles & Responsibilities:

- Designed and deployed interactive dashboards using Power BI and Qlik Sense, significantly improving user engagement and accessibility of complex datasets.
- Conducted in-depth statistical analysis using R, providing valuable insights that supported strategic business decision-making.
- Managed scalable and secure data storage solutions using Azure SQL and Azure Data Warehouse, ensuring high-performance data handling.
- Collaborated with stakeholders to translate business requirements into actionable analytical deliverables using MATLAB and Excel.
- Developed and maintained real-time analytics solutions leveraging Azure Stream Analytics, optimizing data flow for business intelligence applications.
- Created clear, intuitive visual data representations using Looker, enhancing understanding among non-technical stakeholders.
- Performed advanced data manipulation using Microsoft Excel, supporting diverse business functions through high-quality reporting.
- Implemented robust data integration workflows using Informatica, ensuring data consistency, quality, and cross-platform availability.
- Enhanced visualization capabilities by integrating Matplotlib into analytical reports, delivering detailed and meaningful graphical insights.
- Streamlined SQL-based querying and reporting processes, improving response times and the accuracy of data retrieval.
- Leveraged business intelligence insights using Power BI to support comprehensive long-term business strategies.
- Automated complex data processing workflows with Apache NiFi, increasing operational efficiency and reducing manual effort.
- Utilized Microsoft Azure for end-to-end cloud data management and analytics, ensuring a robust and scalable infrastructure.
- Conducted periodic data audits using Excel, ensuring data accuracy, compliance, and high-quality reporting.

- Developed documentation and training materials using PowerPoint, enhancing organizational adoption of new analytics tools and systems.
- Collaborated on cross-functional integration projects, incorporating new data sources into existing infrastructures using SQL and Informatica.
- Led workshops and training sessions on Qlik Sense and R, strengthening analytic capabilities across the organization.
- Monitored and optimized data processes using Azure SQL, ensuring high system reliability, speed, and efficiency.
- Implemented strong security measures for data storage and handling using Azure technologies, protecting sensitive business information.
- Led a team of analysts in deploying a new enterprise analytics platform, overseeing data migration and ensuring minimal business disruption.

Client: Tvisha Technologies, India

Aug 2017 to Sep 2019

Role: Data Integration analyst

Roles& Responsibilities:

- Engineered and managed complex ETL workflows using Informatica and Apache NiFi, ensuring seamless and efficient end-to-end data integration.
- Performed data cleansing, validation, and transformation using Oracle Data Integrator (ODI) and SSIS, maintaining high data quality across enterprise applications.
- Facilitated multi-platform data integrations using SQL and advanced ETL tools, improving system interoperability and operational efficiency.
- Automated real-time data pipelines using Apache Kafka, significantly reducing latency and enhancing streaming data processing.
- Handled structured and semi-structured data including XML and JSON, enabling smooth integration between heterogeneous systems using ODI.
- Configured secure FTP/SFTP connections to manage large-scale data transfers, ensuring data integrity and compliance.
- Integrated external systems using RESTful APIs, expanding data availability and improving data enrichment processes.
- Documented ETL mappings, workflows, and architecture using GIT, ensuring process traceability, version control, and standardization.
- Built cloud-based data integrations using AWS S3, improving data scalability, durability, and accessibility.
- Developed Linux shell scripts to automate data operations, reducing manual intervention and minimizing operational errors.
- Monitored and maintained ETL systems using logs, alerts, and performance metrics to ensure continuous system reliability and accuracy.
- Optimized SQL queries and ODI mappings to enhance performance and reduce data processing time.
- Delivered training to onboarding team members on ETL standards, Informatica, NiFi, and data integration best practices, strengthening team capabilities.
- Collaborated with IT, DevOps, and business teams to gather requirements and design optimal integration solutions aligned with business goals.
- Built complex data mappings and transformations in Informatica, ensuring alignment with business logic and data governance rules.
- Troubleshooted and resolved ETL failures, connectivity issues, and performance bottlenecks, ensuring minimal business disruption.
- Established and enforced data integration best practices, improving consistency, reliability, and scalability of enterprise data pipelines.
- Evaluated and recommended emerging ETL and data integration technologies to enhance business intelligence and analytics capabilities.

Environment: SQL, Informatica, SSIS, Oracle Data Integrator, Git.

Client: Juspay Technologies, India

Jan 2016 to Jul 2017

Role: Data analyst

Roles & Responsibilities:

- Utilized PostgreSQL and Hadoop to perform data analysis and management, delivering actionable insights for strategic decision-making.
- Developed and maintained dashboards and reports using Power BI and QlikView, improving data accessibility, visualization, and business understanding.
- Documented and implemented analytics projects, ensuring detailed and accurate project records using Microsoft Excel.
- Leveraged Apache Spark for processing large-scale datasets, enhancing processing speed and analytical capabilities.
- Managed version control for project documents and scripts using GIT, maintaining consistency, traceability, and auditability.
- Performed data validation and cleansing using SQL, ensuring accuracy and reliability of datasets for downstream analysis.
- Implemented interactive data visualizations with QlikView, enabling dynamic reporting for business users.
- Executed routine data backups and recovery operations, securing critical business data and minimizing risk of loss.
- Utilized Informatica for ETL workflows, streamlining data extraction, transformation, and loading to improve operational efficiency.
- Analyzed large datasets using Excel, identifying key metrics and trends to support data-driven business strategy.
- Collaborated with cross-functional teams to integrate new data sources into the data warehouse, enhancing data diversity and comprehensiveness.
- Provided end-user training and support on dashboards and reporting tools, improving user adoption and engagement.
- Developed comprehensive documentation for data processes and systems using Microsoft Word, enabling knowledge transfer and operational continuity.
- Monitored system performance and user activity with analytics tools, ensuring optimal performance, resource utilization, and system reliability.
- Maintained proficiency in emerging analytics tools and techniques, applying new methods to enhance data analysis and reporting capabilities.

Environment: PostgreSQL, SQL, Apache Hadoop, Apache Spark, Power BI, QlikView, Excel, Microsoft Office, and Git.

Education:

- Bachelor of Technology (B. Tech) in Information Technology from JNTUH, Hyderabad, Telangana, India. - 2016
