Senior Data Analyst

CAREER SUMMARY:

- Senior Data Analyst with 9+ years of experience delivering enterprise analytics solutions across banking, healthcare, insurance, and education domains.
- Proven expertise in regulatory reporting, financial analytics, and compliance automation for global financial institutions including Northern Trust.
- Strong hands-on experience designing scalable data pipelines using Azure Data Factory, Apache NiFi, AWS Glue, and Lambda.
- Advanced proficiency in SQL and cloud data warehouses including Snowflake, Azure Synapse, AWS Redshift, and Hadoop ecosystems.
- Expert in building executive dashboards and KPI reports using Power BI and Tableau for regulatory and leadership reporting.
- Extensive experience in cloud data migration and validation from on-premises systems to Azure and AWS with audit-ready frameworks.
- Strong background in fraud detection, AML analytics, anomaly detection, and suspicious activity monitoring using SQL and Python.
- Proven ability to implement secure data governance frameworks using Azure Purview, RBAC, TDE, and HIPAA-compliant controls.
- Hands-on experience developing predictive and machine learning models using AWS SageMaker, Azure ML, and Python libraries.
- Experienced in real-time and near-real-time analytics using Azure Stream Analytics, AWS Kinesis, and IoT-based data integrations.
- Strong Agile practitioner with expertise in requirements gathering, stakeholder workshops, and cross-functional delivery.
- Deep domain expertise in financial services, healthcare analytics, actuarial data, and enterprise risk management.
- Results-driven analyst recognized for building scalable, secure, and high-impact analytics platforms that improve decision-making and regulatory readiness.

TECHNICAL SKILLS:

- **Programming Languages:** Python, R, SQL
- **Data Visualization:** Power BI, Qlik Sense, Looker, Tableau, MATLAB, Matplotlib, Plotly, Data Studio
- **Data Manipulation:** Talend Open Studio, SSIS, Jupiter Notebooks
- **Database Management:** MySQL, ANSI SQL, SQL Server, Azure SQL
- **Reporting and BI:** SSRS, Power BI, Qlik Sense, Looker
- **Cloud Services:** Azure Stream Analytics, Azure Blob, Databricks, Azure Cognitive Services
- **Project Management:** JIRA, Confluence, Microsoft Visio, BPMN, Agile/Scrum
- **Collaboration Tools:** SharePoint, Microsoft Teams, GIT

PROFESSIONAL EXPERIENCE:

Client: Northern trust, Chicago, IL

Feb 2024 to till date

Role: Senior Data Analyst

Roles & Responsibilities:

- Played a pivotal role in streamlining regulatory letter generation by automating OpenText workflows and SQL-based data extraction, significantly reducing manual processing and operational risk.
- Collaborated with finance, compliance, and IT teams to align analytics initiatives with business objectives, supporting liquidity tracking, asset performance analysis, and risk mitigation strategies.

- Created and maintained STTM (Source-to-Target Mapping) for capital markets and regulatory datasets (trades/positions/agreements), defining field mappings, transformation logic, and validation rules across Snowflake and Azure ETL pipelines.
- Led UAT calls with Finance, Compliance, and Risk teams to validate regulatory letter outputs and Power BI dashboards, track defects in Jira, and drive retesting until closure.
- Coordinated PROD release calls with Engineering/IT to confirm deployment readiness, run schedules, dependency checks, rollback plans, and post-release monitoring for regulatory and risk analytics workflows.
- Secured formal Business/UAT sign-off by presenting reconciliation results, control checks, and dashboard validation summaries, ensuring audit-ready regulatory reporting and data governance compliance.
- Conducted stakeholder workshops to gather business requirements and demonstrate financial monitoring solutions, resulting in actionable Power BI dashboards for regulatory and executive reporting.
- Defined and documented user stories, technical specifications, and Integration Control Documents (ICDs) in Jira, partnering with Scrum Masters and engineering teams in an Agile delivery model.
- Supported Agile execution by participating in daily Scrum and cross-functional reviews, while creating use cases, activity diagrams, and UML workflows in MS Visio to improve process clarity.
- Automated end-to-end regulatory notification workflows using OpenText integrations and SQL validation logic, enabling scalable system improvements and audit-ready outputs.
- Led migration of core banking and agreement data into Snowflake, validating schemas, transformation logic, and reconciliation rules to support scalable cloud data warehousing.
- Utilized Snowflake to write advanced SQL queries for data extraction, transformation, validation, and aggregation, supporting compliance reporting and downstream analytics use cases.
- Built secure data governance frameworks using Azure Purview, RBAC, and TDE, ensuring controlled access, regulatory compliance, and data privacy across analytics platforms.
- Applied Lean Six Sigma techniques, process mapping, RACI models, and critical path analysis to improve project transparency, stakeholder communication, and delivery efficiency.
- Designed and developed advanced Power BI dashboards and KPI reports using DAX to monitor agreement lifecycles, asset positions, loan performance, and regulatory compliance metrics.
- Conducted financial trend and performance analysis using SQL, Python, and Power BI, enabling leadership to optimize credit risk strategies and loan portfolio performance.
- Built scalable ETL pipelines using Azure Data Factory and Apache NiFi to extract, validate, and transform agreement, transaction, and position data from core banking systems.
- Integrated RESTful APIs using Azure API Management and Python (Flask/FastAPI) to securely exchange data between internal banking platforms and third-party providers.
- Performed comprehensive data profiling, cleansing, and normalization across transactional and analytical datasets to improve data quality and reporting accuracy.
- Executed AML and financial crime analytics by monitoring high-risk transactions and generating Suspicious Activity Reports (SARs) using SQL and Python for compliance teams.
- Developed fraud detection and anomaly analysis workflows using historical transaction data, improving early identification of suspicious activity and reducing false positives.
- Optimized fraud and risk analytics by writing complex SQL queries in Azure SQL and Synapse Analytics, improving detection accuracy and response times.
- Supported CI/CD-aligned analytics deployments by validating data pipelines, SQL scripts, and reporting artifacts across development and production environments.
- Implemented near-real-time analytics using Azure Stream Analytics to monitor loan origination trends and transaction volumes, enabling timely, data-driven operational decisions.

Environment: MS SQL Server, MySQL, Azure SQL Database, Azure Synapse Analytics, Azure Data Lake Storage, Azure Blob Storage, Power BI, Apache NIFI, Azure Data Factory, Apache Spark ALS, Azure Machine Learning, Azure Cognitive Services, Azure API Management, Alteryx, Snowflake, Python (Flask, Fast API, Pandas, Scikit-learn), Azure DevOps, CI/CD Pipelines, GitHub, GitLab, JIRA, Confluence, OpenText

Client: Navi health, Brentwood, TN

Sep 2022 to Dec 2023

Role: Senior Data Analyst

Roles & Responsibilities:

- Developed interactive Tableau dashboards to provide real-time patient insights, enabling healthcare providers to monitor admissions, discharges, and readmission risks.
- Led business requirements gathering using Agile methodology to define project phases for data integration, dashboard development, and healthcare risk modeling
- Built automated ETL pipelines using AWS Glue and Lambda to integrate data from patient management systems into clinical reporting tools, ensuring high data accuracy.
- Designed and optimized SQL queries in AWS Redshift to extract and analyze EHR data, improving patient outcome tracking and cost efficiency.
- Created and maintained STTM (Source-to-Target Mapping) for EHR/patient management datasets, defining field mappings, transformations, and validation rules to support Redshift reporting and Tableau dashboards.
- Led UAT calls with clinical, operations, and compliance stakeholders to validate dashboard metrics (admissions/discharges/readmissions), ETL outputs, and data accuracy; tracked defects to closure.
- Coordinated PROD release calls with data engineering and DevOps teams to confirm deployment readiness, pipeline schedules (Glue/Lambda), dependencies, and post-release monitoring for clinical reporting.
- Secured formal business/UAT sign-off by presenting reconciliation results, ETL validation evidence, and dashboard KPI validation aligned with HIPAA/HITECH reporting expectations.
- Implemented an ETL validation framework in AWS Glue and SQL to ensure accurate synchronization of patient records across EHR systems and analytics platforms.
- Migrated healthcare data from on-premises systems to AWS S3 and Redshift, ensuring HIPAA-compliant storage, scalability, and improved data accessibility.
- Implemented predictive ML models in AWS SageMaker to forecast patient readmission rates and identify high-risk individuals, supporting proactive care strategies.
- Created predictive analytics models to detect chronic disease risks and enhance preventive care, while also identifying fraud in claims processing for optimized reimbursements
- Developed Tableau dashboards integrated with AWS IoT and Amazon Kinesis for real-time vital sign tracking in remote patient monitoring scenarios.
- Automated compliance reporting workflows using AWS Athena and Tableau for HIPAA and HITECH, ensuring audit readiness and timely regulatory submissions.
- Performed SWOT and GAP analysis on healthcare reporting workflows, identifying inefficiencies and recommending data-driven improvements using AWS services.
- Conducted root cause analysis on medication adherence using AWS Redshift and Tableau, enabling targeted intervention strategies for improved patient care.
- Collaborated with medical teams and data analysts to build Tableau-based patient satisfaction dashboards, offering insight into hospital service quality metrics.
- Used GitHub and AWS Code Commit for version control of Tableau dashboards, SQL scripts, and ETL pipelines, ensuring efficient development and deployment cycles.

Environment: AWS Redshift, AWS S3, AWS Glue, AWS Lambda, AWS SageMaker, AWS IoT, AWS Kinesis, AWS Athena, AWS Code Commit, AWS Key Management Service (KMS), Tableau, SQL, Python (Pandas, NumPy, SciPy), GitHub, JIRA, Confluence, Agile Methodology, SWOT Analysis, Gap Analysis, Transparent Data Encryption (TDE), Role-Based Access Control (RBAC).

Client: State Farm, Bloomington, IL

Jan 2020 to Aug 2022

Role: Data Analyst

Roles & Responsibilities:

- Analyzed large-scale structured and semi-structured insurance datasets (policy, claims, actuarial) across Hadoop and Snowflake to support regulatory reporting, financial analytics, and enterprise risk insights.
- Wrote advanced SQL and HiveQL queries to extract, transform, validate, and summarize high-volume insurance data for underwriting, actuarial modeling, and compliance use cases.
- Utilized Snowflake for querying and validating curated bronze/silver/gold layers aligned to enterprise data warehousing and reporting standards.

- Supported end-to-end ETL workflows by validating pipelines ingesting data from Hadoop (HDFS/Hive/Impala) into Snowflake and Azure platforms, ensuring accuracy of transformations and business rules.
- Built and monitored scalable ingestion and transformation pipelines using Azure Data Factory and Azure Databricks, enabling reliable movement of insurance data into analytics-ready datasets.
- Performed data profiling, cleansing, normalization, and reconciliation across multiple source systems to improve data quality, consistency, and audit readiness.
- Created and maintained STTM (Source-to-Target Mapping) for insurance datasets (policy/claims/actuarial), defining field mappings, transformation rules, and validation checks across Hadoop → Snowflake/Azure pipelines.
- Led UAT calls with underwriting, actuarial, compliance, and reporting stakeholders to validate ETL outputs and Power BI KPIs; tracked data defects and drove retesting to closure.
- Coordinated PROD release calls with data engineering/DevOps teams to confirm deployment readiness, pipeline schedules (ADF/Databricks), dependency checks, and post-deployment monitoring.
- Secured business/UAT sign-off by presenting reconciliation evidence, data quality control results, and dashboard validation summaries to ensure audit-ready reporting and regulatory compliance.
- Integrated semi-structured feeds (JSON/XML) into analytical pipelines, applying schema validation and normalization logic prior to warehouse and reporting consumption.
- Collaborated with data engineering teams to troubleshoot ETL issues, enhance pipeline reliability, and improve near-real-time data availability for actuarial and finance stakeholders.
- Developed Python and Spark validation frameworks in Azure Databricks to automate reconciliation, quality checks, and exception reporting, reducing manual effort and improving repeatability.
- Supported actuarial teams on VM-51, mortality, reserve, and experience studies by delivering compliant, validated datasets aligned with regulatory and modeling requirements.
- Implemented data quality controls and reconciliation checks to identify source-to-target discrepancies and partnered with engineering teams to remediate defects at scale.
- Leveraged distributed processing using Python Spark in Databricks to efficiently transform large actuarial and policy datasets within Hadoop/Snowflake ecosystems.
- Validated ingestion schedules and replication logic supporting near-real-time movement patterns to ensure timely availability of operational data for analytics.
- Translated underwriting, actuarial, and finance requirements into detailed business rules, transformation logic, and mapping specifications used across ETL and reporting pipelines.
- Supported data governance initiatives by documenting metadata, lineage, and quality standards (Azure-aligned practices) to meet security, privacy, and regulatory expectations.
- Built executive-ready Power BI dashboards and KPI reports to surface insights on policy performance, claims trends, premium movement, and risk indicators for stakeholders.
- Maintained detailed documentation for SQL logic, ETL workflows, validation controls, and reporting definitions to support audits, knowledge transfer, and CI/CD-aligned releases.

Environment: Environment: Hadoop (HDFS, Hive, Impala), Snowflake (Bronze/Silver/Gold Layers), SQL, HiveQL, Azure Data Factory (ADF), Azure Databricks, Python, Python Spark, Power BI (DAX/KPIs), JSON/XML, ETL Pipelines, Data Profiling/Cleansing/Normalization, Data Validation & Reconciliation, Data Quality Controls, Metadata/Lineage/Data Governance, Regulatory Reporting & Compliance, CI/CD Concepts, Documentation & Audit Support.

Client: Synechron Inc, Pune, India

Sep 2018 to Oct 2019

Role: Data Analyst

Roles & Responsibilities:

- Managed SQL Server databases supporting financial and transactional data, optimizing schemas and queries to improve performance, scalability, and reporting accuracy.
- Developed dynamic SSRS reports to deliver real-time financial insights, enabling business users to monitor portfolio performance, transaction summaries, and operational metrics.

- Implemented SSIS ETL pipelines to integrate data from multiple financial source systems, enhancing data cleansing, transformation, and data migration processes.
- Maintained secure FTP/SFTP processes for transferring sensitive financial files, ensuring data integrity, confidentiality, and compliance with internal controls.
- Performed complex DML operations and developed stored procedures to support financial calculations, reconciliations, and management reporting.
- Built Power BI dashboards to visualize key financial KPIs, trends, and variances, significantly improving data-driven decision-making for finance and operations teams.
- Utilized SQL Server as the backend data store for financial reporting systems, ensuring reliable data storage, retrieval, and audit-ready outputs.
- Designed and maintained financial data aggregation layers to support consolidated reporting for management, compliance, and operational analysis.
- Conducted data cleansing and validation using SQL and SSIS to improve financial data quality, consistency, and reporting accuracy.
- Created comprehensive technical and functional documentation for ETL workflows, reporting logic, and financial data definitions.
- Developed and maintained STTM (Source-to-Target Mapping) for financial datasets, defining field mappings, SSIS transformation logic, and validation rules for SSRS and Power BI reports.
- Led UAT sessions with finance, operations, and compliance stakeholders to validate reports and dashboards; logged defects, coordinated fixes, and supported re-testing.
- Coordinated production release activities with IT teams to deploy SSIS packages, stored procedures, and reporting artifacts; verified schedules, dependencies, and post-release validation.
- Secured formal business/UAT sign-off by presenting reconciliation results, report validations, and data quality evidence aligned with financial reporting standards.
- Implemented data normalization techniques to ensure data integrity and consistency across financial and transactional databases.
- Developed Power BI visualizations to help stakeholders analyze financial performance, trends, and operational indicators.
- Managed version control using Git for SQL scripts, ETL packages, and reporting artifacts to ensure controlled deployments and traceability.
- Designed and executed financial data migration projects using SSIS, ensuring smooth transitions between legacy and target systems.
- Supported financial content and reporting systems by enhancing data access, retrieval, and reporting efficiency.
- Conducted user training sessions for finance and operations teams on dashboards, reports, and reporting workflows.
- Performed routine database maintenance and performance tuning to ensure high availability and reliability of financial applications.
- Collaborated with IT and compliance teams to ensure data security, access controls, and adherence to financial governance standards.

Environment: MS SQL Server, T-SQL, SSIS, SSRS, Power BI, Stored Procedures, DML Operations, Data Aggregation & Reporting, Data Cleansing & Normalization, Data Migration, FTP/SFTP, Git, Documentation, Performance Tuning, Database Maintenance, Windows, MS Excel.

Client: Tatva Soft, Ahmedabad, India

Apr 2016 to Aug 2018

Role: Business Data analyst

Roles & Responsibilities:

- Utilized Python for data analysis and scripting to automate data preparation tasks, improving processing efficiency for healthcare and retail reporting initiatives.
- Managed MySQL databases supporting healthcare and retail datasets, performing schema design and query optimization to ensure reliable and scalable reporting.

- Applied ANSI SQL to extract, validate, and analyze transactional, customer, and operational data, improving data integrity and query performance.
- Developed Tableau dashboards to visualize healthcare utilization metrics, retail sales trends, and operational KPIs, enabling data-driven decision-making for business stakeholders.
- Implemented data cleansing and transformation using Talend Open Studio, improving data quality across claims, customer, and transactional datasets.
- Used Git for version control to manage SQL scripts, ETL jobs, and documentation, ensuring controlled deployments and collaboration across teams.
- Leveraged Docker for containerizing analytics components and ETL processes, improving deployment consistency across development and testing environments.
- Created and maintained STTM (Source-to-Target Mapping) for healthcare and retail datasets, defining field mappings, Talend transformation logic, and validation rules to support accurate reporting outputs.
- Supported UAT activities by leading validation sessions with business users to review Tableau dashboards, SQL reports, and data refresh results; captured issues and coordinated fixes with development teams.
- Coordinated production releases for Talend jobs, SQL scripts, and dashboard updates by confirming schedules, backup plans, and post-deployment validation steps.
- Secured business/UAT sign-off by presenting reconciliation results, test outcomes, and dashboard validation summaries to ensure trusted analytics delivery.
- Built interactive reports and dashboards using Jupyter Notebooks, enabling senior analysts to perform exploratory analysis and share insights in real time.
- Utilized MySQL Workbench for database administration, performance tuning, and troubleshooting to improve reliability of reporting systems.
- Conducted data analysis using Python and Excel to identify trends in healthcare utilization and retail performance, supporting strategic decision-making.
- Developed and maintained data integration pipelines using Talend Open Studio to move data between healthcare systems, retail applications, and analytics platforms.
- Maintained comprehensive project documentation using Git, ensuring senior analysts and stakeholders had access to up-to-date technical and business artifacts.
- Implemented database backup and disaster recovery procedures in MySQL to ensure data security, availability, and business continuity.
- Collaborated with application development teams to integrate analytics datasets into healthcare and retail applications, improving reporting and insight accessibility.
- Provided technical support and end-user training on dashboards, reports, and analytics tools, increasing user adoption and data literacy across teams.

Environment: Python, ANSI SQL, MySQL, MySQL Workbench, Tableau, Talend Open Studio, Data Integration Pipelines, Data Cleansing & Transformation, Jupyter Notebooks, Excel, Git, Docker, Database Backup & Recovery, Reporting/Dashboards, Documentation, End-User Support & Training.

Education: Bachelor's degree in computer science engineering from LPU, Punjab, India. – 2016
