

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 5+ years of experience delivering analytical solutions across healthcare, marketing, and enterprise environments. Strong expertise in SQL, Power BI, Excel, Tableau, and Python for data extraction, cleansing, analysis, visualization, and reporting. Proven ability to design end-to-end analytics solutions from a business perspective, define KPIs, and translate complex datasets into actionable insights. Experienced in data validation, backend data testing, and maintaining high data quality standards to support accurate decision-making.

CORE SKILLS

Analytics & Reporting: Data Analysis, KPI Tracking, Forecasting, Statistical Analysis

Tools & Languages: SQL, Python (Pandas, NumPy), Excel (Power Query)

Visualization: Power BI (DAX / Power Query), Tableau, Executive & Operational Dashboards

Data Platforms: My SQL Server, Snowflake

Cloud: AWS

PROFESSIONAL EXPERIENCE

Pigybak — Data Analyst

June 2024 - Current

- Collected, cleaned, and consolidated contractor and customer review data from external platforms (Yelp, Google) and internal CRM/operational systems using Excel, SQL, and Python to ensure data accuracy and consistency.
- Designed and developed interactive dashboards in Power BI and Tableau to visualize campaign performance, customer engagement, geographic trends, and growth opportunities for stakeholders.
- Integrated review data with demographic and geographic datasets (population, income, neighbourhood data) to perform location-based demand and market opportunity analysis, contributing to a 10–15% improvement in marketing efficiency and targeting effectiveness.
- Identified high-demand, underserved neighbourhoods by analyzing gaps between customer demand and contractor supply, supporting data-driven market expansion decisions.
- Supported revenue growth of 15–20% by identifying high-demand, underserved markets, optimizing contractor coverage, and enabling more precise geographic targeting through data-driven insights.
- Collaborated with cross-functional teams (marketing, product, operations) to translate analytical findings into recommendations for contractor onboarding, targeting strategies, and customer engagement; documented key discussions to support knowledge sharing.

Virtusa — Data Analyst

Jan 2022 – June 2023

- Created and executed SQL scripts and DML statements to validate banking transactions, reconcile account balances, and ensure accuracy across transactional and reporting databases.
- Performed data profiling and data quality checks using SQL, Excel, and Python to ensure completeness and accuracy across source systems, reducing data discrepancies and improving reporting reliability by 10–15%.
- Built interactive Power BI dashboards to monitor key banking KPIs, including transaction volumes, high-risk/flagged transactions, account-level risk indicators, and monthly trends- enabling faster risk identification and contributing to a 15–20% improvement in operational monitoring efficiency.
- Created DAX measures and star schema to calculate risk percentages, transaction averages, and period-over-period comparisons, enabling dynamic analysis with filters and slicers.
- Supported analytics workflows by using Python (Pandas, NumPy) and Excel for reconciliation and trend analysis, assisting with AWS-based data pipelines (Amazon S3, Glue/ETL), and collaborating with stakeholders to translate business requirements into SQL queries and reports.

Optum- Data Analyst

Jan 2020 – Dec 2021

- Built interactive dashboards in Power BI and Tableau to support physicians, healthcare administrators, and business stakeholders with data-driven insights on claims and fraud trends.
 - Supported a healthcare fraud analytics dashboard by analyzing large insurance claims datasets (facts and dimension tables), including claim amounts, fraud indicators, provider specialties, geographic patterns, and time-based trends.
 - Defined and tracked key business KPIs such as total claims, total claim amount, average cost per claim, fraud count, and fraud percentage to assess financial and operational impact.
 - Improved analytics efficiency and decision-making speed by 25–30% through automated dashboards, KPI tracking, and reliable data pipelines, reducing manual reporting effort and enabling faster financial and operational insights for healthcare administrators.
 - Used SQL to extract, filter, validate, and reconcile claims data from Snowflake and relational databases, performing source-to-target checks to ensure data accuracy and consistency.
 - Supported data preparation and ETL workflows by using Excel and Python (Pandas) for data cleaning and exploratory analysis, and assisting with AWS services (Amazon S3, AWS Glue) to prepare data for reporting.
-

EDUCATION

M.S Computer Science Management — Avila University

Bachelor of Technology in Electrical & Electronics Engineering — JNTUK
