

Bisrat Gebreamlak

Data Analyst

LOCATION: Washington, DC | PHONE: +1 (202) 550-9127 | EMAIL: Bisratgebreamlak97@gmail.com | LINKEDIN

Professional Summary:

Technical Data Analyst with 4+ years of experience specializing in data extraction, cleaning, transformation, and analysis across financial and technology domains. Strong expertise in SQL and Python for working with large, complex datasets, building reliable data pipelines, and automating recurring analytical workflows. Experienced in exploratory data analysis, statistical methods, and performance tracking with a focus on data accuracy, efficiency, and reproducibility. Prefers a hands-on, technical approach to analytics, using visualization tools primarily for validation and monitoring rather than business interpretation or BI storytelling.

- **Data Analysis & Querying:** Advanced use of SQL and Python to extract, join, and analyze large, complex datasets for analytical and operational use cases.
- **Data Cleaning & Transformation:** Strong experience preparing raw, messy data using ETL techniques, validation rules, and standardization practices to ensure accuracy and consistency.
- **Exploratory & Statistical Analysis:** Perform EDA, trend analysis, forecasting, and metric evaluation to identify patterns and performance drivers within datasets.
- **Automation & Workflow Optimization:** Build reusable scripts and automated reporting processes to reduce manual effort, improve efficiency, and maintain data reliability.
- **Technical Collaboration & Data Support:** Work closely with engineering, product, and analytics teams to support data needs, troubleshoot issues, and maintain high data quality standards.

Technical Skills:

- **Programming & Query Languages:** SQL (MySQL, PostgreSQL, SQL Server), Python (Pandas, NumPy, Matplotlib, Seaborn), R
- **Data Analysis & Statistical Methods:** Exploratory Data Analysis (EDA), descriptive statistics, trend analysis, forecasting, KPI calculation, A/B testing (basic)
- **Data Cleaning & Preparation:** Data cleaning, data transformation, data wrangling, ETL workflows, data validation, handling missing and inconsistent data
- **Data Processing & ETL Tools:** API data extraction, Excel Power Query, automated data pipelines, data quality checks
- **Databases & Data Platforms:** Relational databases, SQL-based data modeling, Snowflake (basic), Google BigQuery (basic)
- **Visualization & Reporting (Secondary):** Tableau, Power BI, Excel dashboards (used primarily for data validation and performance monitoring)
- **Tools & Development Environment:** Advanced Excel (Pivot Tables, XLOOKUP/VLOOKUP, formulas), Jupyter Notebook, Git/GitHub, Jira, Confluence

Professional Experiences:

TRUIST FINANCIAL

Role: Data Analyst

September 2025 – Present

As a Data Analyst at Truist Financial, I support enterprise-level analytics by working with large financial datasets to extract, clean, and analyze data for operational and analytical use cases. My role focuses on building reliable SQL queries, maintaining data quality, and automating analytical workflows to ensure accurate and scalable data outputs.

Key Responsibilities & Achievements:

- Develop and maintain SQL-based queries and datasets to extract, clean, and validate large financial data for analysis and reporting.
- Implement performance tracking frameworks and standardized metrics to support consistent monitoring of risk and operational indicators.
- Collaborate with engineering and analytics teams to improve data structures and query performance, reducing data processing time by approximately 20%.
- Perform exploratory data analysis and trend analysis to identify patterns, anomalies, and performance drivers within financial datasets.
- Build and maintain automated reporting workflows to reduce manual effort and ensure repeatable, reliable outputs.
- Apply data validation rules, documentation, and quality checks to support data governance and accuracy standards.

- Use visualization tools such as Tableau and Power BI primarily for data validation, monitoring, and internal analysis support.

Dell Technologies

Role: Data Analyst

September 2023 – August 2025

At Dell Technologies, I worked as a Data Analyst supporting sales, product, and operational analytics through technical data analysis. My responsibilities centered on querying structured datasets, performing statistical analysis, and automating analytical processes to improve reporting efficiency and data reliability.

Key Responsibilities & Achievements:

- Extracted, transformed, and analyzed large datasets using SQL, Python, and Excel to support sales, supply chain, and product analytics.
- Conducted exploratory and statistical analysis, including customer segmentation and trend analysis, to evaluate performance metrics and patterns.
- Optimized SQL queries and supported data warehouse improvements in collaboration with IT and data engineering teams, improving reporting performance.
- Designed and maintained automated analytical reports and dashboards to improve data accessibility and reduce recurring manual work.
- Led data quality improvement initiatives by implementing validation checks and standardized processes, reducing reporting errors by approximately 25%.
- Created reusable scripts, queries, and documentation to improve analytical consistency and team productivity.
- Used Tableau and Power BI as supporting tools for monitoring KPIs and validating analytical results.

Earlier Professional Experience

Role: Data Analyst / IT Analyst Asmara, Eritrea | 2015 – 2019

During this period, I supported multiple local organizations across technology and service sectors by providing data analysis, reporting, and technical support. My work focused on improving data accuracy, optimizing workflows, and delivering insights that helped teams make informed business decisions.

Key Responsibilities & Achievements:

- Collected, cleaned, and analyzed operational data to identify trends and improve reporting accuracy.
- Built Excel-based dashboards and performance reports to support weekly and monthly decision-making.
- Collaborated with internal teams to resolve data issues, maintain records, and improve database quality.
- Automated repetitive reporting tasks, reducing manual workload and improving process efficiency.
- Supported IT teams with troubleshooting, documentation, and user-level technical assistance.
- Contributed to process improvement initiatives by identifying bottlenecks and recommending data-driven solutions.

Projects:

- **Sales Performance Analysis Dashboard (SQL | Excel | Tableau)**
Analyzed a retail sales dataset by extracting and cleaning data using SQL and Excel. Performed exploratory data analysis to calculate revenue trends, product performance, and regional metrics. Built a Tableau dashboard primarily to validate results and monitor calculated KPIs.
- **Customer Churn Analysis (Python | Pandas | Matplotlib)**
Conducted exploratory data analysis on a telecom customer dataset to identify patterns associated with customer churn. Cleaned and prepared data using Python, calculated churn-related metrics, and visualized trends to support analytical evaluation.
- **Data Cleaning & ETL Pipeline (Python | Excel | Power Query)**
Developed a small ETL workflow to extract, clean, and standardize raw CSV datasets. Applied data validation techniques, handled missing values, standardized formats, and automated recurring data preparation tasks using Python scripts and Excel Power Query.
- **Market Trends Data Analysis Project (Excel | Power BI)**
Analyzed publicly available market trend data by cleaning datasets, computing year-over-year metrics, and validating category-level trends. Used Power BI primarily for data validation and performance monitoring rather than business storytelling.

Educations:

- **Master of Science (M.S.) in Information Science**
University of Eastern Finland, Joensuu, Finland | Sep 2022 – Aug 2024
- **Bachelor of Applied Science (B.A.Sc.) in Computer Science**
Eritrean Institute of Technology, Asmara, Eritrea | Sep 2011 – Jun 2015
