Technical Summary

Software Engineer with 7+ Years of Professional Experience specializing in Java, Python, and Big Data. Proven expertise in developing and deploying scalable, containerized applications on AWS using Docker & Kubernetes. Strong background in machine learning, computer vision, and distributed systems, with a history of leading successful projects from conception to implementation.

Education

Bachelor of Science in Computer Science |
New Jersey Institute of Technology (NJIT) | 09/2016 – 05/2019

Work Experience

Feedzai | Software Engineer | 11/2021 – Present | Atl, GA

- Developed, maintained, and debugged proprietary fraud detection software using Java, Maven, and XML/YML configurations within a Linux environment.
- Supported global banks in monitoring & processing millions of daily transactions and preventing fraud & laundering through ML-driven solutions.
- Engineered and managed AWS deployment pipelines, ensuring robust and scalable containerized solutions using Docker.
- Played a key role in migrating legacy deployment processes to a modern, standardized Kubernetes infrastructure, improving system reliability and optimizing scalability.
- Collaborated with a team of engineers to deploy and customize client-specific projects and environments, reducing false positives and improving reliability across multiple client environments.

Infosys | Specialist Programmer | 11/2019 – 11/2021
Atl, GA

- Promoted early for strong technical aptitude, becoming a Full Stack Specialist Programmer.
- Key contributor to the **SunTrust & BB&T** bank merger into **Truist**, ensuring accurate migration of millions of banking records utilizing Java, Hadoop, and Spark.
- Contributed to AWS-based solutions for **State Farm's** claim handling system, integrating Python scripts for database automation and data processing.

Leadership

President & Lead Programmer of NJIT's Robotics Team
New Jersey Institute of Technology (NJIT) | 05/2018 – 05/2019

- Led the team to compete in **VexU** local, state, and world championships. Delegated various design, build, and programming tasks to members for competition robots.
- Delved in hobby robotics, such as a physical chess playing robot.

Technical Skills

- **Languages:** Java, Python, SQL
- **Big Data & ML:** Hadoop, Spark, MongoDB, Data Processing, TensorFlow, OpenCV
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Maven, Jenkins, CI/CD Pipelines, XML, YML
- **Tools & Methods:** Distributed Systems, Data Pipelines, Git, Linux, Multi-threading, Agile/Scrum

Projects & Research

5G and its Real-World Impact on Health and Safety
Verizon 5G Labs | 01/2019 – 05/2019 | Newark, NJ

- Collaborated in a team to build a proof-of-concept computer vision application hosted remotely on edge computers as a demonstration of 5G's low-latency data processing capabilities.
- Designed and developed an assistive tool for patients with Dementia/Alzheimer's to remotely monitor stove usage and prevent fire hazards using OpenCV, TensorFlow, and deep neural networks.
- Demonstrated proof-of-concept for remote hazard detection (stove usage, fire risks, etc.) in connected homes.
- Processed video data in real-time over a 5G network to validate high-speed over-air data transmission.

Multi-Synchronous Autonomous Robotics Research &

Low-Cost LIDAR Sensor Fusion for Mapping Applications in Transportation Industry

Robotics and Data Lab | 01/2018 – 08/2018 | Newark, NJ

- Designed and implemented a multi-threaded Java solution to coordinate 100+ autonomous robots with sensor integration.
- 1st Place, Undergraduate Research & Innovation Competition.
- Developed multi sensor data fusion system combining LIDAR, Inertial measurements, gyroscope, and accelerometers for roadway mapping and roadway anomaly early warning detection systems.

Achievements & Certificates

Undergraduate Research and Innovation: 1st Place [03/28/2018]

- 1st Place for my written proposal and presentation of a proof of concept of sensor data fusion for roadway mapping.

Autodesk Inventor Certified User [03/04/2016]

- Certified user of Autodesk's 3D modeling software, Inventor
