LinkedIn: <https://www.linkedin.com/in/raymond-j-province>

PROFESSIONAL SUMMARY:

Experienced Software Engineer with demonstrated success in complex analysis, design, development, testing and debugging of complex SaaS applications. Lead experience with excellent communication and problem-solving skills. Enjoys coaching and mentoring junior team members on the proper PoC, SDLC and SLA procedures, along with the implementations of RESTful operations and Microservices.

EMPLOYMENT HISTORY:

Wells Fargo, Frederick MD

03/2015 – 11/2025

Full Stack Lead Software Engineer / Technical Lead (SME)

Technical Team Lead - Capital Markets **agile software development** and **production support** team for 3 **SaaS FinTech** applications, utilizing backend (**C++**, **Python**, **PHP**, **JAVA**) and frontend (**JavaScript**, **React**, **TypeScript**) technologies. Team collaborated 100% remote across the United States and India.

Was responsible for **software development**, **24/7-production support**, **deployment workflows**, **automated testing**, **regression testing**, **peer-to-peer code reviews** and **release management**.

Technologies Implemented:

C++, **PHP**, **JAVA**, **Python**, **Django**, **JavaScript**, **React**, **TypeScript**, **HTML**, **XML**, **CSS**, **JSON**

- Design, develop and deliver scalable and maintainable frontend subsystems using **JavaScript**, **React**, **TypeScript**, **HTML5** and **CSS3**
- Participated in the company wide **AWS** cloud migration that included **EC2**, **S3**, **Lambda**, **API Gateway**, **SMS**, **SQS**, **IAM**, **SSM**, **KMS** and **Secrets Manager**
- Design and develop high-performance, API-based backend services using **Python**, **Django** on an **AWS EC2**, **Linux Red Hat** server that scaled to meet business need
- Enhanced **DevOps** software development practices, focusing on **CI/CD**, configuration and containerization, infrastructure as code and monitoring best practices
- Updated existing **Python**, **C++**, **JAVA** and **JavaScript** code, including many optimization(s) for the semi-annual safety and soundness project using **Fortify** as the code analyzer
- Successfully led a complex 18-month tech refresh, involving performance tuning, server upgrades and software updates to safer, newer versions (**PHP**, **JAVA**, **Python**, **JavaScript**)
- Developed and optimized complex **SQL queries**, **stored procedures**, views and joins to support Capital Markets reporting, loan processing and transactional data integrity
- Performed **database performance tuning**, **query optimization**, **indexing strategies** and **data validation** to improve response times and system scalability
- Ensured the health and uptime of business-critical systems using **AppDynamics** (APM), including participating in on-call rotations and assisting in performance optimization

Wells Fargo (18 Month Contact), Frederick MD

07/2013 – 01/2015

Senior Full Stack Software Engineer

Played a pivotal role in designing and developing the next generation Fannie Mae and Freddie Mac Capital Markets software. Including loan origination, loan pooling and trade delivery.

Successfully participated in the development of 3 Python/Django/JavaScript applications. Responsibilities include building and debugging the UI REST API code composed of JavaScript, JQuery, ExtJS, JSON and AJAX. This included GET/PUT/POST handling as well as working with XML/JSON metadata.

Technologies Implemented:

Python, Django, PHP, HTML, XML, CSS, JavaScript, JQuery, ExtJS, JSON, AJAX

- Managed software deployment validations, including integrity checks, regression testing, SPLI testing and defect verification, ensuring quality and reliability of the software
- Authored comprehensive documentation for the ASDS regression testing procedures and provided training for other team members, fostering a knowledgeable and competent work environment
- Implemented new features and functionality into the current Capital Markets software
- Worked with others to correct defects in the development and production environments
- Assisted in deployment and validation using various smoke testing techniques
- Developed a robust system to validate new software changes and perform SPLI testing

Social Security, Woodlawn MD

10/2000 – 06/2013

Senior Full Stack LAMP Software Developer

Designed and developed several security software applications for the ongoing S.A.F.E. project at the Social Security Administration OPSS division. Specializing in interactive JavaScript/AJAX websites with live content including file upload, change logs, verification, validation and incident reporting.

Technologies Implemented:

C++, PHP, HTML, XML, CSS, JavaScript, JQuery, JSON, AJAX, MySQL

- Developed an interactive Automated Incident Reporting System (AIRS) to allow regional and area offices to electronically document any disturbances
- Designed and developed a fully dynamic and interactive logging system for recording maintenance activities along with complete HTML and CSV statistical reports
- Created the GUI for a new assessment system which allows offices to properly make security assessments and to follow through with the required remediation
- Introduced new technologies into their Physical Access Management (PAM) to allow for a more secure environment and security platforms

EDUCATION:

Bachelor of Science: Computer Science
Temple School Campus
GPA 4.0/4.0 Presidents List

1988

HONORS & AWARDS:

PC Magazine Software Developer of the Year

1999

1999 Nominated and 1st Place Award Winner of the "1999 Software Developer of the Year" award (File Utilities) sponsored by Ziff-Davis and PC Magazine. The award was for my incredibly fast and accurate multi-composite logical text search engine entitled Find It.

Commissioners Citation (SSA)

2011

Receive a Social Security Administration Commissioner's Citation for my superior performance and outstanding accomplishments as a software developer, team leader and representative at the Social Security Head Quarters in Woodlawn, Maryland.

CERTIFICATES OF ACHIEVEMENTS:

Mastering Cloud Engineering with AWS and Python	June 25, 2025	Click to verify
Mastering Algorithms and Data Structures in Python	July 04, 2025	Click to verify
Mastering Design Patterns with Python	July 10, 2025	Click to verify
Journey into Data Science with Python	August 14, 2025	Click to verify
Clean Code in Python Through Hands-on Practice	August 21, 2025	Click to verify
Django for Back-End Development	September 19, 2025	Click to verify
Front-End Engineering with React	November 08, 2025	Click to verify

SKILLS, TECHNOLOGIES, TOOLS AND FRAMEWORKS:

Back-End: C, C++, PHP, Python, Bash, JSON, AJAX, SOAP, JAVA

Front-End: JavaScript, React, TypeScript, DOM, HTML5, XML, CSS, REST API

Frameworks: YUI, JQuery, ExtJS, Django, scikit-learn, NumPy, Pandas, Seaborn

Databases: SQL, SQLite, MySQL, PostgreSQL, NoSQL

Cloud: AWS, Amazon DynamoDB, Amazon S3, Amazon SNS, Amazon SQS, AWS Key Management Service, AWS Secrets Manager

DevOps: Ant Hill Pro, Jenkins, uDeploy, Docker, SVN, GIT, Bugzilla

Agile: BMC Remedy, Scrum, Jira, Confluence
