Senior Data Analyst

[LinkedIn](#)

PROFESSIONAL SUMMARY:

- Senior Data Analyst with 8+ years of hands-on experience using Python and SQL to independently analyze large datasets, identify anomalies, and resolve complex data quality issues across insurance, healthcare, and financial domains.
- Strong expertise in writing complex SQL queries for data validation, reconciliation, and root-cause analysis, and using Python (Pandas, NumPy) for data manipulation, automation, and exploratory analysis.
- Proven ability to translate analytical findings into actionable insights, clearly document assumptions and remediation steps, and collaborate directly with business and technical stakeholders in fast-paced, client-facing environments.
- Strong expertise in Life & Annuity, reinsurance, policy lifecycle, claims, and actuarial data, supporting critical business operations and regulatory reporting.
- Designed and built scalable ingestion pipelines to process large JSON/XML/SFTP feeds into HDFS, Hive, and cloud Data Lakes using PySpark and SQL.
- Hands-on experience in complex SQL, HiveQL, and PySpark transformations for data extraction, cleansing, validation, aggregation, and reconciliation.
- Developed robust ETL/ELT frameworks integrating MDM, EDW, PCS, and third-party systems, ensuring high data quality, lineage, and traceability.
- Experienced in business requirement gathering, stakeholder collaboration, and converting business needs into technical specifications, BRDs, FRDs, and STTMs.
- Built interactive dashboards and analytical models using Tableau and Power BI to provide insights for decision-making across underwriting, claims, and policy management.
- Performed GAP analysis, SWOT assessments, and root-cause analysis to identify process inefficiencies and propose data-driven improvements.
- Optimized PySpark and Hive jobs using partitioning, bucketing, optimized file formats (Parquet/ORC), and performance tuning to minimize compute cost and improve throughput.
- Collaborated with cross-functional teams—business analysts, developers, QA, modeling teams, and onshore/offshore stakeholders—to deliver scalable data solutions.
- Ensured secure handling of PII/PHI, applying encryption, masking, and compliance best practices across data ingestion, processing, and reporting layers.
- Automated pipelines and deployments using Azure DevOps, Git, and CI/CD processes, reducing manual intervention and accelerating delivery cycles.
- Designed data models and data-flow architectures, aligning domain-driven design principles with business and actuarial requirements.
- Troubleshoot ingestion and transformation issues using PySpark logs, Hive queries, and Excel reconciliations, ensuring timely defect resolution and SLAs are met.
- Developed predictive and descriptive analytics supporting claims forecasting, underwriting risk evaluation, and reinsurance reporting.
- Applied strong technical writing skills, creating end-to-end documentation including data lineage, mapping documents, workflow diagrams, and standards.
- Implemented enterprise data governance frameworks using Collibra, Ataccama, and Informatica to improve data quality, stewardship, and metadata management.
- Actively contributed to Agile/Scrum ceremonies, managing sprints, stand-ups, backlogs, and collaborating closely to ensure iterative, high-quality releases.

CERTIFICATIONS/TRAINING:

[**AWS Certified Cloud Practitioner**](#)

Aug 2024 - Aug 2027

TECHNICAL SKILLS:

Business Intelligence & Data Visualization	Power BI, Tableau, QlikView, Matplotlib, Seaborn, Interactive Dashboarding, Executive Reporting, Oracle Analytics Cloud (OAC)
Programming & Data Analysis	Python (Pandas, NumPy, data analysis, automation, anomaly detection), SQL (complex joins, subqueries, validation)
Big Data & Data Engineering	Apache Hadoop, Spark, Hive, Pig, Sqoop, ETL Tools (SSIS, Informatica, Alteryx, Talend), Data Warehousing (Snowflake – used for metric reporting & ETL optimization, Redshift, SQL Server, AWS S3), Kafka
Cloud Computing & AI Solutions	Azure (Data Factory, Synapse, ML, Cognitive Services), AWS (S3, Redshift, SageMaker), AI-driven Analytics, Machine Learning Models, Apache Spark ALS
Data Governance & Management	Collibra, Ataccama, Informatica Data Quality, Master Data Management (MDM), PostgreSQL, MySQL, NoSQL, Regulatory Compliance
Project Management & Process Modeling	Agile (Scrum, Kanban), Waterfall, JIRA, Confluence, Git, Business Analysis (GAP, SWOT, BRD, FRD), Visio, Lucidchart
CRM & Market Analysis Tools	Salesforce, Client Master Data Hub, MARS (Market Asset Reporting System), Google Analytics, Customer Segmentation, Market Trend Analysis
Documentation & Reporting	Excel, PowerPoint, SharePoint, Confluence, Report Automation

PROFESSIONAL EXPERIENCE:

Client: Equitable, Charlotte, NC

June 2025 – Present

Role: Senior Data Analyst

Roles & Responsibilities:

- Designed and delivered end-to-end scalable data engineering solutions to ingest and transform policy, premium, and claims data from SFTP/JSON sources into Data Lake and EDW using PySpark, Hive, and Hadoop.
- Led large-scale data validation and reconciliation initiatives involving vendor spend, headcount, contract dates, and remaining budgets using advanced Excel templates and SQL analysis.
- Built and maintained Excel-based tracking tools, pivot tables, formulas, and status dashboards to monitor vendor onboarding, contract readiness, and migration progress across multiple stakeholders.
- Analyzed contract and vendor datasets to validate alignment between Statements of Work (SOWs), financial data, cost centers, and invoicing requirements prior to system onboarding.
- Coordinated with Procurement, Legal, Finance, and external vendors to validate contract data, resolve discrepancies, and ensure compliance before system migrations and invoicing enablement.
- Supported system migration initiatives by preparing clean, standardized templates for downstream system loading, testing, and approval workflows.
- Tracked risks, issues, and dependencies across vendor onboarding and migration activities, providing weekly status reports and escalation summaries to project leadership.
- Independently analyzed large policy, premium, and claims datasets using SQL and Python to identify anomalies, inconsistencies, and data quality issues prior to downstream consumption.
- Wrote complex SQL queries (joins, subqueries, aggregations) to validate source-to-target data, investigate discrepancies, and support issue resolution.
- Used Python (Pandas, NumPy) to automate data profiling, reconciliation checks, and ad-hoc analysis for faster root-cause identification.
- Documented analysis findings, assumptions, and remediation steps, working directly with business and engineering teams to close data defects.
- Supported fast-paced, stakeholder-driven investigations by translating raw data findings into clear, actionable insights.
- Collaborated with business stakeholders, actuarial teams, and downstream system owners to gather requirements, validate business logic, and ensure data accuracy across all functional areas.

- Built and automated ETL/ELT workflows integrating systems such as MDM, PCS, PHI, and Commission Systems, ensuring data consistency, lineage, and traceability.
- Performed technical assessments and solution design to ensure alignment with business rules, system architecture, and scalability requirements.
- Developed and executed data validation, reconciliation, and profiling processes to ensure data completeness, accuracy, and consistency between source feeds and EDW targets.
- Partnered with environment and infrastructure teams to validate SFTP connectivity, data transfer checkpoints, and secure ingestion paths into enterprise platforms.
- Optimized PySpark and Hive queries by analyzing performance bottlenecks, tuning partitions, and re-engineering legacy ETL components to improve throughput and reduce processing time.
- Actively supported data architecture modernization, recommending decoupled, cloud-ready, and scalable architectural improvements aligned with big-data and cloud platforms.
- Developed and maintained CI/CD pipelines in Azure DevOps, enabling automated deployments, job scheduling, monitoring, and continuous integration across development environments.
- Ensured secure handling of PHI/PII data, implementing encryption, masking, access control, and compliance with data governance frameworks.
- Troubleshoot data ingestion, transformation, and performance issues, conducting deep root-cause analysis and coordinating with cross-functional teams for timely resolution.

Environment: PySpark, Hadoop, Hive, HDFS, Azure Data Lake, Azure DevOps, AWS Glue, AWS S3, AWS Lambda, EDW, MDM, PCS, PHI Systems, JSON/SFTP Ingestion, ETL/ELT Pipelines, SQL, HiveQL, Data Validation & Reconciliation Tools, Git, Azure Repos, Data Governance & Security (PHI/PII Encryption/Masking), CI/CD Pipelines, Agile/Scrum Framework, STTM Documentation

Client: AIG, New York, NY

Jan 2024 – Dec 2024

Role: Senior Data Analyst

Roles & Responsibilities:

- Analyzed Life & Annuity insurance data across claims, underwriting, policy, and reinsurance workflows using SQL and Python to drive business insights and operational improvements.
- Collaborated with business stakeholders to gather requirements, resolve data issues, and translate functional needs into BRDs, FRDs, and detailed source-to-target mapping documents (STTM).
- Performed detailed analysis of vendor, contract, and financial datasets to ensure accuracy of spend, headcount, expiration dates, and budget allocations prior to reporting and invoicing cycles.
- Supported third-party vendor data onboarding by validating documentation, financial attributes, and compliance requirements in coordination with procurement and governance teams.
- Prepared structured Excel templates and reconciliation reports to support contract reviews, system integrations, and audit readiness.
- Collaborated with cross-functional stakeholders to align operational data with compliance policies, contractual obligations, and downstream invoicing processes.
- Performed hands-on data analysis using SQL and Python to identify trends, errors, and inconsistencies across insurance datasets.
- Conducted independent root-cause analysis on data quality issues and partnered with stakeholders to resolve discrepancies.
- Developed SQL-based validation checks and Python scripts to improve data accuracy and reliability for reporting and analytics.
- Developed interactive dashboards in Power BI and Tableau to visualize policy metrics, claims trends, reinsurance performance, fraud indicators, and operational KPIs.
- Designed and automated ETL pipelines using Azure Data Factory, SSIS, and Informatica to streamline data ingestion, transformation, and enterprise-wide reporting.
- Integrated structured and unstructured data sources into Azure Blob Storage and Azure Synapse, enabling scalable cloud-based analytics and self-service reporting.
- Conducted data profiling, validation, and quality audits ensuring accuracy, completeness, and regulatory compliance across the insurance lifecycle.
- Optimized complex SQL queries and Azure SQL Database performance to enhance reporting efficiency for underwriting, claims, and reinsurance analytics.

- Developed predictive analytics and ML models in Azure Machine Learning and Databricks for claims forecasting, fraud detection, risk scoring, and customer segmentation.
- Automated reinsurance and claims workflows using Azure Cognitive Services, reducing manual processing and enhancing operational efficiency.
- Executed cloud migration of legacy insurance systems to Azure Synapse, improving scalability, performance, and reporting speed for actuarial, finance, and compliance teams.
- Implemented enterprise data governance frameworks using Collibra and Informatica to maintain standardized data definitions, lineage, and regulatory compliance.
- Created documentation in SharePoint and Confluence and trained business users on dashboards, analytics tools, and ML model outputs to support data-driven decision-making.

Environment: SQL, Snowflake, Python (NumPy, Pandas, Scikit-Learn), R, Tableau, Excel, Azure (Data Factory, Synapse, Blob Storage, SQL DB, Machine Learning, Databricks, Cognitive Services), Informatica, Collibra, Power BI, SharePoint, Confluence, ETL Pipelines, Predictive Modeling, Data Governance.

Client: Cognizant / Optum, Chicago, IL

Dec 2021 to May 2023

Role: Data analyst

Roles & Responsibilities:

- Designed and deployed predictive models using AWS SageMaker to forecast patient admissions, healthcare utilization, and operational trends, supporting proactive decision-making.
- Built interactive Tableau dashboards to visualize patient outcomes, key healthcare KPIs, and real-time monitoring metrics for clinicians and leadership teams.
- Managed large-scale healthcare datasets in AWS Redshift, ensuring scalable, secure, and high-availability storage aligned with HIPAA requirements.
- Developed personalized patient care recommendation systems using Apache Spark ALS, improving treatment efficiency and patient engagement.
- Automated end-to-end data workflows and reporting processes using Alteryx, reducing manual effort and increasing data processing accuracy and speed.
- Led HIPAA-compliant data governance initiatives, establishing policies, monitoring data practices, and ensuring secure handling of sensitive patient information.
- Migrated legacy healthcare systems and EHR data to AWS Cloud, enhancing accessibility, performance, and scalability for analytics and reporting.
- Performed data profiling, cleansing, and ETL optimization using Informatica, Alteryx, and SQL to maintain high data quality for predictive modeling and clinical reporting.
- Implemented Apache Spark for real-time processing and analysis of large-scale healthcare data streams, enabling timely insights and improved patient care.
- Collaborated with clinicians, data scientists, and IT teams to align analytical solutions with clinical workflows, business objectives, and operational needs.

Environment: AWS SageMaker, AWS Redshift, AWS Cloud, Apache Spark, Spark ALS, Tableau, Alteryx, Informatica, SQL, EHR Systems, HIPAA Compliance, Data Governance Tools, Real-time Data Processing, Clinical Data Analytics, ETL Pipelines, Predictive Modeling, Healthcare Data Management, Confluence (Documentation).

Client: Cognizant / State of South Dakota, Pierre , SD

May 2019 – Dec 2021

Role: Data Analyst

Roles & Responsibilities:

- Conducted competitive, market, and GAP/SWOT analyses using SQL, R, and Excel to provide insights that supported strategic planning, customer engagement, and retail optimization.
- Performed master data stewardship activities in Salesforce, standardizing account and contact data to maintain accuracy and alignment with governance rules.
- Analyzed customer behavior, market trends, and operational data to support decision-making and improve customer satisfaction, retention, and marketing efficiency.
- Managed and optimized SQL Server databases, ensuring data integrity, accuracy, and availability for reporting, audits, and analytical workflows.
- Collaborated with state auditing teams to ensure compliance with governmental accounting standards and provided analytical support for audit reviews.
- Led cross-functional communication and requirement gathering, facilitating stakeholder meetings using Webex, Teams, and Slack, and translating needs into actionable initiatives.
- Supported project management activities using Trello and Microsoft Project, tracking deliverables with Gantt charts and ensuring timely execution of business and IT projects.

- Documented business processes and data flows using Visio and Lucidchart, improving workflow clarity, operational efficiency, and process standardization.

Environment: SQL, R, Excel, Power BI, SQL Server, Salesforce CRM, Microsoft Project, Trello, Webex, Microsoft Teams, Slack, Git, Agile, Visio, Lucidchart.

Client: Wipro

Nov 2017 to Apr 2019

Role: Data analyst

Roles& Responsibilities:

- Extracted, analyzed, and managed large-scale healthcare datasets by developing and optimizing complex SQL queries to support reporting, operational insights, and business decision-making.
- Designed and maintained end-to-end ETL workflows using SSIS, ensuring seamless data integration, transformation, and loading across multiple healthcare systems.
- Built interactive Power BI dashboards to help stakeholders track provider performance, claims trends, and key healthcare operational KPIs.
- Performed data cleansing, transformation, and validation activities, ensuring high data accuracy, consistency, and reliability for analytics and regulatory reporting.
- Automated reporting and improved system performance by creating stored procedures, views, and optimizing database queries, reducing manual efforts and enhancing processing speed.
- Ensured data security and compliance by managing secure FTP data transfers, monitoring data integrity, and documenting SQL processes to support collaboration and knowledge sharing.

Environment: SSRS, SQL Server, SSIS, FTP, Power BI, Data Cleansing & Transformation Tools

Education:

- Masters in data science from University of Newhaven, 2024.
- Bachelor of Technology (B. Tech) from Sri Indu College of Engineering & Technology(JNTUH), Hyderabad , India. – 2017.
