Nikhil Kotrashetty

Data Analyst

SUMMARY

Data Analyst with 3+ years building Python predictive models, SAS time series forecasting, and R regression analysis on AWS Redshift and Snowflake. Expertise in automated ETL pipelines, A/B testing, and statistical modeling delivering fraud detection, churn prediction, and cost reduction through advanced analytics infrastructure.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn, TensorFlow), SQL, R

Database: Microsoft SQL Server, PostgreSQL, MySQL

Data Visualization Tools and Platforms: Tableau, Power BI, Advanced Excel (VLOOKUP, Pivot Tables)

Statistical Analysis: A/B testing, Descriptive Statistics, Predictive Analytics, Hypothesis Testing, Regression Analysis, Time Series Analysis

Cloud Platforms and Version Control: AWS (S3, EC2, Redshift), Microsoft Azure, Snowflake, Git, GitHub

ETL and Data Pipeline Tools: Alteryx, Talend, Apache Airflow

Soft Skills: Critical thinking, Problem-solving, Attention to detail, Communication Skills, Team Collaboration, Stakeholder Management

EDUCATION

Master of Science in Management of Technology | New York University, New York

May 2024

Bachelor of Engineering | Gogte Institute of Technology, India

May 2021

WORK EXPERIENCE

Data Analyst | PNC, Massachusetts

January 2024 - Current

- Engineered **Python** predictive models analyzing 800K+ customer transactions monthly, improving churn classification accuracy by 28% and enabling targeted retention campaigns that increased customer lifetime value.
- Performed time series forecasting using **SAS** on 36-month revenue datasets, identifying seasonal demand patterns that reduced inventory holding costs by 18% and improved quarterly budget accuracy.
- Conducted root cause analysis using **AWS Redshift** and **Python** statistical libraries, applying **A/B testing** on 50K+ user cohorts to optimize product pricing strategies that increased conversion rates.
- Built **Power BI** executive dashboards integrating multi-source financial data across 12 business units, reducing monthly reporting cycles by 35% and enabling real-time P&L monitoring for C-suite decision-making.
- Designed automated **ETL pipelines** consolidating data from 8 enterprise systems using **Python** and **SQL**, enabling accurate revenue forecasting models that improved planning accuracy and reduced forecast errors.
- Executed statistical **regression analysis** on 2.4M sales records using **R** and **SQL**, identifying key revenue drivers and customer segmentation patterns that informed marketing strategy adjustments, resulting in 15% improvement in campaign targeting efficiency.

Data Analyst | Sage Softtech, India

January 2021 - August 2022

- Built **Python ETL** pipelines processing 500K patient records weekly from EHR system, reducing pharmacy inventory discrepancies by 34% through automated data validation and cleansing protocols.
- Developed **SQL-based** readmission risk models analyzing patient data, achieving prediction accuracy that helped clinical teams reduce 30-day readmissions by 12% across facilities.
- Created **Tableau** executive dashboards consolidating clinical data, identifying \$450K in duplicate pharmaceutical orders through cross-referenced inventory analysis and vendor comparisons.
- Conducted **A/B testing** on medication adherence protocols using **Python** statistical libraries, measuring patient compliance rates that improved chronic disease management outcomes by 19% quarterly.
- Migrated legacy reporting to **Azure Snowflake** infrastructure, enabling real-time analytics that reduced monthly financial reporting cycles from 72 hours to 8 hours processing time.
- Applied **regression analysis** on insurance claims patterns using **R**, detecting billing anomalies through statistical outlier identification that prevented \$180K in fraudulent reimbursement requests annually.

PROJECTS

Chobani, New York Data Analyst (Capstone Project):

- Developed a comprehensive data analytics framework by employing advanced data cleaning and transformation techniques, resulting in a 25% increase in promotional effectiveness across various product lines.
- Automated data workflows with Python, minimizing human errors and boosting scalability, reducing processing time by 40%.
- Extracted actionable insights from Nielsen datasets through the use of SQL, pivot tables, and advanced Excel functions, improving the accuracy of sales forecasts by 15%. Analyzed key business metrics and adjusted timing and type of promotions, leading to a 10% increase in net revenue and a 12% boost in profit margins.
- Designed real-time financial interactive PowerBI dashboards, presented detailed analyses of promotional strategies to senior stakeholders, enabling the commercial team to make data-driven decisions, resulting in a 20% improvement in marketing ROI.

Data Wrangling and Visualization: Flight Delays and Cancellations:

- Analyzed a dataset of 393K rows and streamlined it to a lean 50K rows for enhanced usability, exhibiting expertise in data wrangling.
- Enhanced data excellence by achieving 100% data completeness, rectifying null values across 7 key fields, and standardizing time-related data, eliminating format discrepancies using Excel (VLOOKUP/XLOOKUP).
- Produced impactful visualizations and presented data on 6,952 flights and 304 airports to make data-driven strategic decisions.
- Decreased the average fare forecast error by 15%, elevating customer satisfaction and enhancing prediction accuracy to 90%.

CERTIFICATIONS

Microsoft Certified: Azure Data Engineer Associate

Microsoft Certified: Azure Fundamentals
