PROFESSIONAL SUMMARY:

- Data Analyst with 5+ years of experience across finance and healthcare, specializing in financial risk analytics, AML/fraud transaction monitoring, predictive modeling support, and regulatory reporting. Skilled in gathering business requirements, defining data rules, and preparing high-quality datasets for risk, compliance, and executive stakeholders.
- Proficient in SQL (Snowflake, Synapse, PostgreSQL, Oracle), Python, R, Tableau, Alteryx, SAS Viya, and Advanced Excel, with hands-on expertise in trend analysis, KPI tracking, scenario analysis, data quality frameworks, and automation of CCAR, Basel III, and Dodd-Frank reporting workflows.
- Experienced in transaction monitoring analytics, alert effectiveness assessment, rule threshold tuning, model performance analysis, and NLP/GenAI (Vertex AI) for regulatory document processing. Strong ability to communicate insights to senior leadership and regulators, including support for Federal Reserve examinations.

WORK EXPERIENCE:

State Street – TX

August 2022 – Present

Data Analyst

- Gathered requirements from risk, compliance, and treasury teams to understand the reporting needs, AML/fraud use cases, and data gaps in existing risk workflows.
- Translated business requirements into data requirements by identifying required fields, defining business rules, and outlining data validation criteria for credit risk, AML, and regulatory reporting.
- Developed data quality checks and validation rules to ensure completeness and accuracy of datasets before dashboards, AML analytics, and regulatory reporting.
- Analyzed AML alert patterns to identify false positives and refined rule thresholds in collaboration with compliance teams, improving detection accuracy.
- Prepared and transformed datasets using SQL in Snowflake and Azure Synapse, cleaning and structuring multi-billion-record transaction datasets to ensure high-quality inputs for analysis, dashboards, and regulatory reports.
- Performed analytical data preparation like data cleaning, joining, profiling, and quality checks which reduced the dependency on Data Engineering and improved turnaround time for risk and compliance requests.
- Analyze regulatory and risk datasets using Python, performing trend analysis, outlier detection, KPI tracking, and scenario analysis to support decision-making for senior risk leaders.
- Automated recurring reporting workflows (CCAR, Basel III, Dodd-Frank) using SQL, Python, Alteryx, and SAS Viya, reducing manual reporting efforts by 65% and improving data accuracy.
- Built and maintained Tableau dashboards for CFO, CRO, and Risk Committees, visualizing liquidity ratios, VAR trends, P&L insights, and AML metrics for executive-level decision making.
- Leveraged Vertex AI and GenAI NLP models to automate text extraction and summarization from regulatory documents, reducing manual review time and supporting data-driven compliance decisions.
- Ensure data governance by documenting data lineage, validation steps, and quality rules in Collibra and Azure Purview, supporting SOX and GDPR compliance.
- Communicated insights by presenting analytical findings to risk and compliance leaders using Advanced Excel summaries (pivot tables, lookups) and visual reports, and supported quarterly meetings with Federal Reserve examiners.

Cognizant – India

November 2019 – July 2021

Data Analyst

- Developed SQL queries in PostgreSQL and Oracle SQL to extract, cleanse, and validate over 500k patient records from EHR systems(Epic,Cerner), ensuring high-quality data for readmission risk analysis.
- Used GCP BigQuery for scalable querying and storage of large healthcare datasets, enabling population-level insights across underserved regions.
- Integrated SNOMED CT and standardized clinical terminology, reducing data mismatches by 25% in multi-source healthcare integrations.
- Utilized Python with Pandas and NumPy to automate data wrangling pipelines, handling unstructured clinical notes using NLP techniques and integrating HL7/FHIR protocols for seamless data interoperability across hospital networks.
- Ensured HIPAA and GDPR compliance by anonymizing PHI, performing routine audits, and implementing data privacy controls across hospital datasets..
- Applied R's dplyr and tidyr packages for epidemiological analysis of disease patterns, identifying correlations in ICD-10 and CPT-coded datasets to support clinical decision-making.

- Implemented predictive analytics models using regression and survival analysis in Scikit-Learn, forecasting readmission risks with 85% accuracy across 10k+ patient cohorts.
- Created time-series and cohort visualizations using Matplotlib and Seaborn to illustrate readmission trends and clinical patterns for stakeholders.
- Coordinated with doctors and administrators via Slack for feedback loops, refining analytics models based on real-world hospital workflows and patient journeys.
- Translated complex statistical findings into actionable insights through presentations, influencing hospital policies that decreased overall readmission rates by 20% across partnered facilities.

TECHNICAL SKILLS:

Programming & Scripting:

Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (Snowflake SQL, T-SQL, PL/SQL, PostgreSQL, Oracle SQL), R (dplyr, tidyr)

Data Preparation & ETL:

Data Cleaning, Data Transformation, Data Quality Frameworks, Feature Preparation, SQL-Based ETL, Alteryx, SAS Viya, Azure Synapse, Snowflake, GCP BigQuery, HL7/FHIR (Healthcare)

Databases & Cloud Platforms:

Snowflake, Azure Synapse, PostgreSQL, Oracle, GCP BigQuery, Microsoft Azure (Purview, OpenAI)

Analytics & Reporting:

Trend Analysis, KPI Tracking, Scenario Analysis, Predictive Analytics (Regression, Survival Analysis), Epidemiological Modeling, NLP Text Extraction (Vertex AI, Azure OpenAI)

Risk, AML & Compliance Analytics:

Transaction Monitoring, AML Rule Analysis, Alert Effectiveness Review, Threshold Tuning, Risk Reporting, CCAR, Basel III, Dodd-Frank, Stress Testing, Capital Adequacy Insights

Data Visualization & BI:

Tableau (Executive Dashboards), Power BI, Matplotlib, Seaborn, Advanced Excel (PivotTables, Lookups, Power Query)

Data Governance & Compliance:

Data Lineage, Validation Rules, Collibra, Azure Purview, SOX, GDPR, HIPAA, Data Anonymization

Collaboration & Communication:

Stakeholder Requirement Gathering, Cross-Functional Collaboration, Executive Reporting, Presentations to Risk Committees & Federal Reserve Examiners

EDUCATION:

Master of Science in Data Science - Christian Brothers University, Memphis, TN, USA

Relevant Coursework: Machine Learning, Statistical Modeling, Data Visualization, Big Data Analytics

Bachelor of Technology in Computer Science and Engineering – Holy Mary Institute of Technology, Hyderabad, India

Relevant Coursework: Algorithms, Database Systems, Artificial Intelligence, Cloud Computing
