Results-driven Data Analyst 3+ years of experience delivering actionable business insights by collecting, processing, and analyzing large datasets across diverse domains. Adept at SQL, Python, R, Tableau, Power BI, AWS, Azure, Snowflake, and advanced statistical modeling. Skilled in designing ETL pipelines, implementing data governance, and building interactive dashboards to drive strategic decision-making. Strong track record of improving operational efficiency, enhancing data quality, and enabling data-driven strategies that boost business KPIs.

- **Languages & Data Analysis Tools:** Python (Pandas, NumPy, Seaborn, Matplotlib), R, SQL, Excel (Pivot Tables, VLOOKUP, Macros, Power Query, Power Pivot, Power View)
- **Visualization Tools:** Tableau, Power BI, Looker, Google Data Studio
- **Databases & Data Warehousing:** MySQL, SQL Server, MongoDB, Cassandra, Oracle, Snowflake, Redshift
- **Cloud & Big Data Technology:** AWS (S3, EC2, IAM, RDS, Lambda), Azure, Hadoop, Spark, Kafka
- **ETL & Data Engineering:** Talend, Informatica, SSIS, SSAS, SSRS, Airflow, Alteryx, Data Cleaning, Data Wrangling
- **CI/CD & DevOps Tools:** Docker, Kubernetes, Jenkins, Shell Scripting, Git, GitHub
- **Machine Learning & Analytics:** Regression, Classification, Clustering, Decision Tree, Boosting & Bagging, NLP, Time-Series Forecasting, Hypothesis Testing, ANOVA
- **Project Management & Agile Tools:** Jira, Trello, ServiceNow, ServiceFirst
- **IDEs & Development Tools:** Visual Studio Code, Jupyter Notebook, RStudio, Atom
- **Compliance & Governance:** HIPAA, HITECH Act, CMS, SOX, GDPR, State Privacy Laws
- **Other Tools:** Microsoft Office Suite (PowerPoint, Excel, Word), REST APIs
- **Soft Skills:** Critical Thinking, Problem-Solving, Communication Skills, Presentation Skills

Data Analyst, Accenture	03/2024 – Present Remote, USA
- Designed and executed complex SQL Server and PostgreSQL queries to extract, validate, and analyze multi-source client data, ensuring accurate financial and operational reporting for executive and stakeholder decision-making. - Built Excel-based financial and operational models using pivot tables, Power Query, and macros to forecast revenue, track expenses, and analyze cost variances, improving budgeting accuracy and client reporting efficiency by 15%. - Developed interactive dashboards in Power BI and Tableau to visualize KPIs, product performance, and operational metrics, reducing manual reporting effort by 40% and enabling near real-time analytics for client decision-makers. - Created and maintained ETL workflows with Talend and Informatica, integrating ERP, CRM, and third-party API data into centralized reporting systems, improving cross-functional access and data consistency for multiple client engagements. - Performed time-series forecasting and trend analysis in R and Python to optimize inventory and resource planning, reducing stockouts and excess holding costs by 18%, improving overall operational efficiency. - Implemented data quality rules and anomaly detection processes to ensure reliable datasets, enhancing the accuracy of analytics, reporting models, and decision-making for clients across multiple business units. - Collaborated with clients and internal teams to translate business requirements into databases, ETL pipelines, and analytical solutions, aligning data architecture and reporting systems with operational, regulatory, and compliance standards. - Conducted A/B testing, cohort analysis, and performance evaluations for new features and pricing strategies, delivering actionable insights to client product and operations teams to optimize business outcomes. - Documented ETL mapping, data lineage, and process workflows for client knowledge bases, audits, and compliance readiness, ensuring transparency, reproducibility, and adherence to governance standards across multiple projects. - Supported Agile/Scrum delivery, contributing data-driven insights during sprint planning, backlog refinement, and retrospectives, prioritizing initiatives that maximize client value, efficiency, and operational performance.	

- Designed and optimized complex SQL queries to extract, transform, and aggregate data from claims, provider, and payer systems; reduced average query runtime by 40%, improving reporting turnaround and enabling faster decision-making for leadership teams.
- Developed and maintained interactive Tableau and Power BI dashboards tracking KPIs such as claims turnaround, payment accuracy, and network efficiency; improved stakeholder reporting speed by 35% through drill-down features and automated refresh schedules.
- Built automated ETL pipelines using Python (Pandas, NumPy) and Snowflake to ingest, clean, and transform multi-terabyte healthcare and financial datasets, eliminating 30+ hours/month of manual work and ensuring consistent data availability for analytics teams.
- Conducted advanced statistical analyses (regression, hypothesis testing, ANOVA) in Python and R to identify drivers of member and provider behavior; findings informed payer strategies that increased retention and reduced claims leakage by 12%.
- Implemented data quality frameworks involving profiling, deduplication, and validation across transactional and claims datasets; achieved a 25% improvement in data accuracy and compliance with HIPAA and GDPR regulations for sensitive healthcare records.
- Integrated AWS S3 and Redshift into enterprise workflows to handle large-scale structured/unstructured healthcare datasets, enabling scalable storage and high-performance querying for analytical workloads.
- Collaborated with cross-functional teams (finance, operations, product, provider relations) to translate business requirements into technical data models and KPI scorecards, ensuring alignment with organizational strategy and measurable ROI.
- Partnered with data engineers to redesign data warehouse schemas and indexing strategies, reducing BI dashboard load times by 35% and improving overall user experience for analysts and business stakeholders.
- Automated recurring reporting processes using Python scripts, Excel VBA, and REST APIs, reducing manual intervention and report generation errors while improving productivity for operations and compliance teams.
- Created comprehensive documentation including data dictionaries, pipeline workflows, and governance standards to support knowledge transfer and onboarding of new analysts in healthcare analytics.

Master in Data Science Analytics Florida Atlantic University, USA	01/2023 – 12/2024
Bachelor in Electronics and Communication Engineering Maturi Venkata Subba Rao Engineering College, India	07/2018 – 06/2022
