

DARSH YOGESH THAKOR

+1 (315) 491-8739 | darshthakor5901@gmail.com | www.linkedin.com/in/darsh-thakor

SUMMARY: Analytical professional with hands-on experience in analyzing large datasets, building machine learning models, and exploring trends in workforce, compliance, and operational datasets. Experienced in Python, SQL, and Power BI to organize data, create reports, and share insights that help improve decisions.

TECHNICAL SKILLS

Machine Learning: Classification & Regression, Risk Modeling, Forecasting, Model Validation (Scikit-Learn, Pandas, NumPy)

Data Analyst: SQL-based Analysis, EDA, Power BI, Tableau, Data Visualization, Business Insights

Data Engineer: Relational Databases (SQL), Data Warehousing & ETL Pipelines, Cloud Data Platforms (AWS, Redshift, Snowflake), Data Modeling: dbt

PROFESSIONAL EXPERIENCE

Data Analyst (Part-Time, Hybrid) - St. John's Community Services (SJCS)

January 2026 - Present

iConsult Collaborative, Syracuse University, NY

- Collaborated with SJCS to track Direct Support Professional (DSP) employees across four states using Power BI dashboards.
- Collected and processed workforce data from PayComm to calculate quarterly DSP retention rates and summarize workforce trends.
- Built data models, created measures with DAX, and designed reports to visualize hiring, exits, and retention patterns for easy interpretation.
- Analyzed the data to provide insights that help improve staffing, retention, and workforce planning.

Intern - Data Analyst, Adani Electricity Mumbai Limited, India

January 2024 - May 2024

- Explored safety incident data using Python (Pandas, Matplotlib) by grouping records by location and incident type and visualizing trends to understand where issues occurred most often.
- Built Power BI dashboards to monitor basic safety metrics such as signboard coverage and compliance status.
- Ran simple A/B comparisons on the Business Excellence SharePoint site to check how users interacted with different layouts and content, using basic statistical checks to support design decisions.
- Used SQL queries to review internal data related to safety processes and employee feedback.

Business Process Analyst – Tessy Plastic's (Onsite)

Auburn, NY | August 2025 - December 2025

- Examined clean-room manufacturing and warehouse data for glucose monitor production to find areas where processes were slow or inconsistent.
- Calculated basic performance measures such as production time, rework rates, and material movement to understand overall efficiency.
- Explored data to identify material handling and storage issues that affected production speed and monitored bottlenecks.
- Used Lean Six Sigma principles and statistical analysis to suggest improvements for manufacturing processes.

ACADEMIC PROJECTS

Crime Detection in Syracuse using Machine Learning

January 2025 - May 2025

- Analyzed large-scale crime incident data (2023–2024) from the Syracuse Open Data Portal along with monthly unemployment rates to study hourly, monthly, and seasonal crime trends.
- Created a grid-based spatial identifier by converting latitude and longitude into uniform city zones, enabling area-wise crime frequency and risk analysis.
- Built SARIMA time-series models on aggregated crime counts to forecast monthly crime trends and capture recurring seasonal patterns.
- Trained a Random Forest classifier using time, location, crime type, and unemployment features to classify city areas into Low, Medium, and High crime-risk zones, achieving 88.6% accuracy.

Electricity Demand Forecasting in North & South Carolina

August 2024 - December 2024

- Built predictive machine learning models (Regression, Random Forest) to forecast electricity demand across 5,000 households.
- Analyzed peak-load and blackout risk under rising summer temperatures using time-series forecasting and statistical analysis.
- Conducted hypothesis testing and scenario analysis (temperature increase, housing age, cooling systems) to quantify demand stress.
- Developed an R Shiny dashboard for demand forecasting, data visualization, and scenario-based energy planning.

Healthcare Data Warehouse using Snowflake & dbt

August 2025 - December 2025

- Built an ELT pipeline in Snowflake using dbt, transforming raw hospital, patient, treatment, and employee data into analytics-ready tables.
- Modeled fact and dimension tables with staging layers and data quality checks to support consistent Power BI reporting.
- Enabled reliable analysis of patient activity, treatment costs, and employee performance through centralized data models.

EDUCATION

Syracuse University, School of Information Studies, Syracuse, NY

May 2026

M.S. Applied Data Science

Relevant Coursework: Applied Machine Learning, Data Warehouse, Lean Six Sigma, Scripting with Data Analysis

University of Mumbai, India

July 2023

Bachelor of Engineering in Computer Engineering
