SUMMARY

Experienced in optimizing supply chain operations using tools like Excel, Power Query, SAP ERP, Power BI, and Tableau. Skilled in demand forecasting, MRP planning, SQL analysis, and improving forecasting accuracy. Proven track record in reducing lead times, managing inventory with WMS systems, and applying Lean/Six Sigma methodologies to enhance efficiency. Strong project management experience with MS Project and JIRA to ensure timely, cost-effective delivery. Demonstrated ability to lead cross-functional teams, streamline workflows, and drive continuous improvement in supply chain processes. Passionate about leveraging data and technology to optimize performance and reduce costs.

EXPERIENCE

Supply Chain Analyst

Comco Systems

October 2023 – Present, Denton, TX

- Used Advanced Excel and Power Query to automate monthly reports, which cut down data processing time by 40% and helped make forecasts more accurate.
- Helped roll out SAP ERP tools for procurement and inventory tasks, which made things run smoother and increased on-time supplier deliveries by 25%.
- Looked at past sales data and used regression models to forecast demand more accurately, leading to a 15% improvement in forecast results.
- Created interactive dashboards in Power BI and Tableau so teams could see key supply chain metrics clearly and make decisions faster.
- Applied MRP planning methods to make sure materials were available when needed, which helped avoid stockouts and reduced extra inventory.
- Worked with teams from different departments to improve supply chain processes like reducing lead times and consolidating vendors.
- Wrote advanced SQL queries to pull and analyze supply chain data from various sources, making it easier to spot trends and issues.
- Handled inventory using warehouse systems and barcode scanners, improving accuracy and lowering storage costs.
- Used Lean and Six Sigma tools to find and fix slowdowns in logistics operations, which helped everything move more efficiently.
- Tracked progress and tasks for big supply chain projects using MS Project and JIRA, making sure deadlines and goals were met across teams.

Supply Chain Planner

Cygni Energy

July 2021 – December 2022, India

- Helped track raw material usage and daily production data in Excel to support plant reporting and material planning.
- Assisted with entering purchase orders and inventory updates into SAP, ensuring accurate records for steel coils, billets, and other raw inputs.
- Collected historical production and shipment data to support basic forecasting of material demand and delivery schedules.
- Created simple visual charts in Power BI to help supervisors monitor daily throughput and scrap rates across production lines, improving visibility of key metrics by 25%.
- Followed up with warehouse staff and planners to confirm material availability against planned rolling and casting schedules.
- Supported procurement by organizing vendor information and helping track delivery lead times, contributing to a 12% reduction in delayed deliveries.
- Ran basic SQL queries to pull inventory and shipping data for weekly team meetings, speeding up reporting by 30%.
- Helped perform cycle counts in the warehouse and updated inventory levels using barcode scanners and WMS tools, improving stock accuracy by 22%.
- Participated in process walk-throughs with logistics and operations teams to learn about flow bottlenecks and assist with time studies.
- Updated tasks and timelines for plant improvement projects in MS Project and JIRA, helping the team stay aligned on maintenance and supply goals.

EDUCATION

Master of Arts (M.A.) – Econometrics and Quantitative Analysis

Wichita State University • Wichita, KS • 2024

SKILLS

- Advanced Excel & Power Query
- Enterprise Resource Planning (ERP) Systems
- Demand Forecasting & Planning
- Data Analytics & Visualization Tools
- Material Requirements Planning (MRP)
- Supply Chain Optimization
- SQL & Database Management
- Inventory Management Systems
