QA Automation Engineer

PROFESSIONAL SUMMARY

QA Automation Engineer with more than **6 years of experience in QA Engineering & 2 years of prior Desktop Support Engineering experience**. Results-oriented **Software Development Engineer in Test** with expertise in **Agile (Scrum)** methodology. Good knowledge and understanding of **Java OOP's** concepts. Proficient in **Selenium Web Driver**, and **Cypress**. Well versed in Manual Testing, Front-end (UI) testing, and good knowledge in **Back-end testing**. Executed Black Box Testing like **Smoke, Functional, Regression, and Negative**. Developed, designed, and maintained **Test Automation Frameworks** from scratch using **Java, Maven, Page Object Model (POM), Behavior Driven (BDD), Cucumber** and successfully developed Automated Testing Scripts. Knowledge in **REST API Automation** using **Rest Assured** library, and **Axios** to test **RESTful Web Services** and **Data Driven (DDD)** using Apache **POI** and **JDBC**. Good knowledge in **Continuous Integration** and **Jenkins**. Hands on experience on version control using **Git/GitHub, Bitbucket**, and used **JIRA** for Project Management and Bug Tracking.

SKILLS

Test Automation Tools: Selenium WebDriver, JDBC, Apache POI, Jenkins, Cucumber, Cypress	Testing Frameworks: BDD, Cucumber, Data Driven Testing, Hybrid, TestNG, Junit
Testing Methods: Functional Testing, Regression Testing, Smoke Testing, API Testing, Front and Back-end Testing, Database Testing, Negative Testing	Design Patterns of Framework: Singleton, Page Object Model (POM)
API: Postman, REST Assured, Restful, Swagger Documents	Version Control: Git, GitHub
Project Management Tools: Jira	Development Tools (IDE): Eclipse, IntelliJ, VS Code, VMWare
Programming Languages: Java, SQL, Gherkin, Javascript, Python	Build Tools: Maven
	Database Management Systems: Oracle, MySQL
	Document and File Generation Tools: HTML, XML, JSON
	Methodologies: Agile/Scrum, Waterfall

PROFESSIONAL EXPERIENCE

Role: Senior QA Automation Engineer

Company: Nextiva

Duration: March 2022 – Present

- Participated in the **Sprint Grooming** and **Sprint planning** providing walk throughs of the bugs and user stories to the development team, as well as provided clarifications for all the **User Stories**.
- Built **Test Cases** for all the new and existing features related to the **Chat** feature of **NextivaOne** application.
- Performed **Smoke, Regression, Positive/Negative, Ad hoc, Sanity, Validation** tests.
- Took a lead during the weekly production releases, performing duties such as Regression check on the pre-prod environment as well as ensuring that all the tickets for that week's release version have been thoroughly tested and validated.
- Built automation test cases using **Cypress** for UI, using **JavaScript**, and **Axios** for **API**, using **Typescript**.

Environment: JavaScript, Cypress, Axios, Jira, BDD Jenkins, Bitbucket, Postman, API, Agile Scrum

Role: QA Automation Engineer

Company: Google

Duration: February 2019 – March 2022

- Participated in User Stories walk through and provided feedback for Acceptance Criteria.
- Followed **Agile Scrum** Testing Methodology, participated in **Daily Scrum, Sprint Planning, Sprint Review, Sprint Retro meetings**, and testing each Sprint deliverables.
- As team member, effectively collaborated with team members to ensure **Functional** and **Regression Testing**.
- Designed and developed (**Behavioral-driven Development**) **BDD** Automation Framework by using **Java** and **Page Object Model (POM)** from scratch using **Selenium WebDriver**.
- Used **Java and Python** for Automation Scripts using **Selenium Framework** and analyze **Java** code and mapping to business rule document.
- Integrated with **Continuous Integration** tool such as **Jenkins** for running test.
- Extensively used **Selenium** locators like **XPath, CSS Selectors** and **Selenium WebDriver** to test Web application.
- Used **Maven** to build and run **Selenium, Cucumber Automation Framework**.
- Involved in automation **Data Driven test** getting data from an **Excel** file using **Apache POI**
- Once Script was executed, Framework used to send Automation reports (**Extent reports / HTML reports / Cucumber JSON reports**) over email.
- Developed and maintained Automation Test Scripts for **API(Web and Client-Server software applications interaction)** using **Java** and automated with **Selenium WebDriver** and **REST Assured library**.
- Responsible to verify **REST Web services API** 's request and to get valid **JSON/ XML** response by **API** using **Get, Post, Put and Delete methods**.
- Experience with **Postman** for **Manual API Testing** and **REST Assured** with **Java** to automate **API Web services** Testing.
- Reported bugs and sent e-mail notifications to developers whenever there is change in status of defects by using **Jenkins**.
- Connected to Database by (**Java Database Connectivity**) **JDBC** to query Database using **SQL** for data verification and validation.

Environment: Java, Selenium WebDriver, JSON, MS Excel, Jira, BDD Jenkins, Git/GitHub, SQL, JUnit, Gherkin, Postman, API,

Role: QA Automation Engineer

Company: Verisign

Duration: November 2016 - February 2019

- Involved in all phases of testing lifecycle (**STLC**) in **Agile/Scrum** environment and scrum ceremonies. Maintained quality development of the Sprint deliverables.

- Followed **Agile Scrum Testing** Methodology, participated in **Daily Scrum, Sprint Planning, Sprint Review, and Sprint Retro** Meetings, and testing each Sprint deliverables.
 - Developed **TestNG framework** from scratch using **Page Object Model** for enhancing test maintenance and reducing code duplication. Used utilizing tools such as **Maven build tool** and **Selenium WebDriver**.
 - Expertise using **Jenkins**, configuring plugins, scheduling **Regression** Tests and **Smoke** Tests for **Continuous Integration**.
 - Involved in automation **Data Driven** test getting data from an Excel file using **Apache POI**
 - Integrated with **Continuous Integration** tool such as **Jenkins** for running Test.
 - Extensively used **Selenium WebDriver** locators like **XPath, CSS Selectors** and to test Web application.
 - Once Script was executed, Framework used to send Automation reports (Extent reports / **HTML reports / Cucumber JSON reports**) over email.
 - Reported software defects on **Jira Xray** and interacted with developers to resolve technical issues.
 - Developed and maintained Automation Test Scripts for Web and **Client-Server software** applications using **Java** and automated with **Selenium WebDriver**.
 - Reported bugs and sent e-mail notifications to developers whenever there is change in status of defects by using **Jenkins**.
 - Connected by **JDBC** to Database to **query** Database using **SQL** for data verification and validation.
- Environment:** Java, POM, Selenium WebDriver, Jira, Jenkins, Git/GitHub, SQL, JDBC, TestNG, Apache POI

EDUCATION

- Saint Peter's University - bachelor's in science, Computer Science

CERTIFICATIONS

- AWS Solutions Architect Associate
- Comp Tia A+
