EDUCATION

Masters in Information Science- Arizona State University **August 2023 - May 2025**
Adv Big Data Analytics, Data Visualization, Adv DB Management Systems, Data in cloud using AWS **GPA: 3.8/4**

Bachelor of Technology - RNS Institute of Technology **August 2017 - August 2021**
Big Data Analytics, DB Management Systems, Data Mining and Data Warehousing **GPA: 3.6/4**

TECHNICAL SKILLS

Programming Languages: SQL, Python, R
Databases: MySQL, PostgreSQL, MongoDB, Cassandra, Oracle, SQL Server
Cloud Platform: AWS, Azure, Microsoft Fabric, Azure Databricks, Azure DevOps, SSIS
Data Visualization: Tableau, Power BI, Excel, Matplotlib, Seaborn
AI/ML Tools: LangGraph, RAG DB, Vector Databases
Certification: [Microsoft Certified: Power BI Data Analyst Associate](#) | [AWS Certified Data Engineer: Associate](#)

PROFESSIONAL EXPERIENCE

Data Engineer: CVS Health **August 2024 - Present**
Skills: Azure Databricks, SSIS, Power BI, Azure DevOps, Snowflake, Oracle, RAG

- Architected and deployed cloud-native data pipelines using Azure Databricks and SSIS by migrating legacy systems, resulting in 35% reduction in processing time
- Implemented medallion architecture (Bronze, Silver, Gold) for 20+ TB of healthcare data by designing optimized data models, enabling 40% faster analytics across departments
- Established data governance frameworks using Microsoft Purview by creating automated validation checks, ensuring 100% compliance with HIPAA standards
- Automated ETL/ELT processes using Python and Databricks by redesigning legacy workflows, reducing manual intervention by 60%
- Implemented RAG-based architecture for intelligent data processing, resulting in 30% improved data retrieval accuracy and enhanced query capabilities

Data Engineer: Infosys **July 2020 - July 2023**
Skills: Hive, HDFS, Spark, Python, AWS (S3, Glue), Databricks, Airflow, SSIS, SQL Server, JSON, Linux

- Designed and implemented data modeling structures and schema for distributed systems, enhancing data accuracy and discoverability.
- Built scalable AWS Glue pipelines to integrate JSON, Excel, and SQL Server data into S3, increasing reporting availability by 30%
- Transformed raw data using Hive/Spark, reducing unstructured-to-structured conversion time by 40% across departments.
- Developed SSIS workflows for automated ingestion and reporting, streamlining internal ops and reducing manual processing time by 50%.
- Created and monitored data quality checks to ensure governance standards, supporting reliable KPIs for product and finance teams.

PROJECTS

Yelp Business Review Analytics

Skills: Python, SQL, Snowflake, Amazon S3, Data Engineering, Sentiment Analysis, JSON Parsing, UDFs

- Accomplished end-to-end sentiment and data analysis on 7M+ Yelp reviews by designing a scalable pipeline.
- Improved review insights extraction efficiency by 40% by flattening nested JSON data and loading it into Snowflake relational tables for optimized querying.
- Enhanced sentiment classification accuracy by integrating Python-based logic into Snowflake UDFs for text analysis
