EDUCATION

George Washington University | Master of Science in Data Analytics

May 2026 | Washington, DC

Relevant Coursework: Applied Machine Learning, Big Data Analytics, Cloud Computing, Database Management, Marketing Analytics, Data-Driven Policy

Dayananda Sagar University | B. Tech in Computer Science and Engineering

May 2024 | Bangalore, India

TECHNICAL SKILLS

Programming & Query Languages: SQL, Python (Pandas, NumPy), R, Advanced Excel (Pivot Tables, VLOOKUP)

Data Visualization & Business Intelligence: Power BI (DAX, Power Query), Tableau, Looker, Matplotlib, Seaborn, Plotly

Databases & Big Data: PostgreSQL, MySQL, MongoDB, Snowflake, AWS RDS, BigQuery, PySpark, Databricks

Analytics & Statistical Methods: Statistical Analysis, Predictive Modeling, Regression Analysis, A/B Testing, Hypothesis Testing, Forecasting, Time-Series Analysis, Exploratory Data Analysis (EDA), Data Mining, Trend Analysis

Cloud & AI: AWS (S3, EC2, Lambda, RDS), Git/GitHub, dbt, LangChain, Vector DBs

PROFESSIONAL EXPERIENCE

Data Analyst | Milken Institute School of Public Health

Oct 2025 - Present | Washington, DC

- Cleaned 15,000+ Qualtrics and Typeform survey records, applying SQL and Python wrangling plus governance checks, producing analysis-ready tables and documentation that shortened stakeholder review cycles 30%.
- Automated ETL pipelines in Python, reconciling KPI extracts with SQL validation rules and QA tests; achieved 99% metric accuracy, cutting reporting hours 60% through rule-based validation checks.
- Led requirements gathering with cross-functional partners, delivering Power BI dashboards with DAX KPIs; sped up weekly decision turnaround 25% and lowered ad-hoc requests 40% via clear communication.
- Ran statistical analyses and A/B tests on intervention outcomes, presenting concise stories in PowerPoint; collaborated in Agile workflows, adapting while delivering independent analyses that supported publication.

Data Analyst | Data Science for Sustainable Development

Jan 2025 - Dec 2025 | Washington, DC

- Created Tableau and Looker dashboards on SQL models, standardizing KPIs and definitions; partnered with stakeholders to prioritize delivery, cutting data retrieval time 40% and strengthening consistency.
- Analyzed system logs, metrics, and AWS spend using Python; applied data mining and root-cause analysis to remove bottlenecks, saving \$4.8K annually and boosting query performance 30%.
- Engineered ingestion pipelines with Spark and dbt-style tests, implementing validation, QA, and anomaly monitoring; mentored peers through reviews, raising reporting reliability from 30% to 100%.

Data Scientist | Slash Mark IT Solutions Pvt.Ltd

Feb 2024 - May 2024 | India

- Cleaned and modeled 50K+ customer records in SQL and Python, running regression analyses and forecasting; boosted prediction accuracy 15% and informed product decisions through stakeholder communication.
- Developed ETL pipelines and models in SQL Server and PostgreSQL, applying reconciliation rules and documentation; increased reliability from 30% to 95% and shortened delivery time 20%.
- Collaborated in Agile sprints, building dashboards and stories; prioritized tasks, worked independently, and partnered with teams to ship recommendations that lifted efficiency 30% and outcomes 23%.

PROJECTS

NYISO Energy Market Forecasting & Anomaly Detection

- Engineered PySpark time-series forecasting and anomaly detection pipelines, boosting surge detection speed 33% and identifying seasonal drivers through statistical analysis, delivering monitoring insights for stakeholders.
- Implemented validation checks and reconciliation rules for streaming ingestion, improving data quality and repeatability for governance-friendly reporting; produced stakeholder-ready Matplotlib/Seaborn visuals supporting a 26% resource allocation optimization scenario.

Retail Sales Analytics & Revenue Forecasting (Power BI + SQL)

- Designed a Power BI dashboard with drilldowns and DAX KPIs, enabling self-serve reporting by region, product, and customer segment; enabled faster decisions and informed a projected 7% revenue uplift.
- Optimized SQL transformations and Excel reconciliation checks, cutting report generation time 18% while strengthening QA controls and accuracy; summarized forecasting insights in presentation-ready recommendations for planning discussions and stakeholders.

Modern KPI & Data Quality Platform (Snowflake + dbt + Airflow)

- Built a governed KPI layer on Snowflake using dbt and dimensional data modeling, standardizing 25+ metrics with documented definitions; improved metric consistency 30% and reduced stakeholder disputes 40%.
- Orchestrated Airflow + Python pipelines with validation tests, anomaly alerts, and backfills, sustaining 99% refresh reliability; delivered Looker dashboards on Redshift-style schemas via Agile feedback cycles.
