Summary

Data Analyst with 3+ years of experience transforming complex healthcare and financial datasets into actionable insights through SQL, Python, PySpark, Tableau, Power BI, and Snowflake. Skilled in clinical data processing, risk and fraud analytics, forecasting, statistical modeling, ETL development, and regulatory-aligned reporting. Adept at building automated pipelines, improving data quality, and delivering high-impact dashboards that inform operational decisions across cross-functional teams.

Technical Skills

- **Data Analytics & Visualization:** Excel (Pivot, Power Query), SQL, Python (Pandas, NumPy, SciPy), R, Power BI, Tableau, Looker Studio, KPI Dashboards, Statistical Analysis, Forecasting Models, Cohort Analysis, A/B Testing, Time-Series Analysis, Interactive Reporting.
- **Healthcare Data Management:** EHR/EMR Data Handling, HL7/FHIR Standards, HIPAA Compliance, Claims & Billing Data Analysis, ICD-10/CPT Mapping, Patient Outcomes Analytics, HEDIS & PQRS Metrics, Population Health Insights, Clinical Trial Data Review, Healthcare Data Governance.
- **Financial Data Analytics:** Financial Statement Analysis, Revenue & Cost Modeling, Risk & Fraud Analytics, Credit Scoring, Loan Portfolio Performance, Securities & Market Data Processing, Regulatory Reporting (SOX, CCAR), Payment Transaction Analytics, Financial KPI Monitoring.
- **Data Engineering & Integration:** ETL/ELT Pipelines, Azure Data Factory, Snowflake, Databricks, Apache Airflow, Data Lineage, Data Quality Validation, Metadata Management, API Integrations, Cloud Warehousing (AWS Redshift, BigQuery), Structured & Unstructured Data Processing.
- **Statistical Modeling & Machine Learning:** Regression Models, Classification Techniques, Survival Analysis, Clustering, Feature Engineering, Model Evaluation, Predictive Modeling, Probability Modeling, Automation Scripts, Model Deployment Workflows.

Professional Experience

Data Analyst, JP Morgan Chase

Aug 2024 – Present | Remote, USA

- Developed automated SQL and PySpark pipelines consolidating multi-source trading activity, producing unified analytical datasets supporting downstream risk modeling workflows across equity, credit, and derivatives portfolios.
- Designed Tableau dashboards visualizing intraday liquidity movements, improving treasury team decision-making through enhanced trend insights and streamlined monitoring of short-term funding requirements.
- Built anomaly detection scripts using Python's Scikit-learn to identify irregular transactional behaviors, reducing false-positive fraud alerts by 14% across monitored consumer banking channels.
- Modeled portfolio exposure scenarios using statistical techniques, generating predictive views supporting stress-testing cycles aligned with regulatory requirements and internal capital planning frameworks.
- Implemented data quality scorecards for financial feeds, decreasing reconciliation discrepancies by 19% and improving downstream model stability across multiple risk-calculation environments.
- Engineered Snowflake-based analytical marts integrating loan performance, customer attributes, and macro indicators, enabling cross-functional teams to evaluate credit lifecycle patterns with greater traceability and analytical consistency.

Data Analyst, IQVIA

Aug 2021 – Jul 2023 | Remote, India

- Analyzed multi-source EHR, claims, and lab datasets to support a real-world evidence study, transforming fragmented inputs into structured patient cohorts for downstream clinical insights generation workflows.
- Designed an automated data cleansing pipeline for FHIR-based clinical attributes, resolving schema mismatches and producing standardized datasets consumed by epidemiology teams for outcome measurement.
- Created statistical models evaluating treatment adherence patterns across 47,000 patients, enabling more accurate clinical pathways assessment and improving downstream forecasting accuracy for research partners.
- Built SQL query frameworks and Python processing scripts using Pandas to unify longitudinal observations, generating reliable analytical tables supporting safety signal detection within therapeutic area monitoring initiatives.
- Produced Power BI dashboards visualizing disease progression trends for respiratory cohorts, improving clinical stakeholder visibility and accelerating evidence interpretation across cross-functional research teams.
- Implemented quality validation rules for HL7 messages, reducing data integrity errors by 18% and improving the reliability of patient-level analytics used in real-world studies.
- Developed cohort selection logic and phenotype definitions for oncology datasets, enabling precise patient segmentation aligned with study protocols and enhancing reproducibility of RWE analytics workflows.

Education

Master of Science in Data Analytics Engineering, George Mason University

Aug 2023 – May 2025 | Virginia, USA

Bachelor of Technology, National Institute of Technology

Aug 2019 – May 2023 | Telangana, India
