

Software Engineer Analyst

EXPERIENCE: *ADP Software Engineer Analyst:*

October 2023- Present:

- Designed and implemented MongoDB operations to efficiently create, store, and retrieve credential data using MongoTemplate, ensuring optimized database performance
- Utilized MongoDB Compass for managing and querying JSON documents, supporting critical retrieval processes.
- Developed and tested RESTful APIs using Postman to validate seamless functionality and integration with back-end services.
- Managed version control and source code collaboration with Git, adhering to best practices in a collaborative development environment.
- Proficient in a wide range of development tools, including Docker Desktop, IntelliJ IDEA, MongoDB, Gradle, Bitbucket, Postman, Jira/Tempo, enhancing productivity and streamlining development workflows.
- Contributed to a Spring Boot-based Java application, leveraging Gradle for dependency management and build automation. Familiarity with Jenkins and Skooner logs for debugging.
- Experienced in CI/CD pipelines with Jenkins, and proficient in monitoring and analyzing logs using Skooner for debugging and performance improvements..
- Utilized SonarQube to enforce code quality standards, reduce technical debt, and maintain high code quality across projects.
- Provided technical support across multiple products, offering solutions to complex technical challenges.
- Familiar with Confluence for documentation and knowledge sharing across teams.
- Experience with Splunk for system monitoring and log analysis.
- Utilized SQL Server Management Studio (SSMS) for database querying and workflow optimization.

EXPERIENCE: *Xpanxion/ADP Contractor:*

February 2023 - October 2023:

- Developed and implemented CRUD operations for a Java-based application, ensuring efficient data management and seamless user interactions.
- Integrated JDBC to enable robust database connectivity and streamlined interactions with relational databases within the application.
- Leveraged Git for version control and collaboration, ensuring effective source code management and team coordination.
- Proficient in development tools, including IntelliJ IDEA, Bitbucket, and Postman, facilitating efficient code development, testing, and deployment.
- Gained hands-on experience with Spring Boot, contributing to the development of scalable and maintainable microservices.
- Familiar with CI/CD pipelines using Jenkins for automated builds and deployments.
- Gained experience with SonarQube for code quality analysis, ensuring adherence to industry standards and minimizing code smells.

EXPERIENCE: *Xpanxion/UST Step it Up America Entry Level JAVA Apprentice:*

September 2022 - February 2023:

- Configured and deployed an Apache Tomcat server using Java, enabling efficient hosting and execution of web applications.
- Integrated MySQL for data capture and persistence, ensuring reliable storage and retrieval of application data.
- Developed a full-stack web application using the Spring Framework on the back-end and React for a dynamic, responsive front-end.
- Utilized a diverse tech stack, including Java, HTML, JavaScript, React, Maven, MySQL, Spring, and Hibernate, to create robust, scalable applications.
- Implemented JDBC and SQL for efficient database interactions and back-end operations.
- Leveraged the MVC architecture to develop modular and maintainable web applications.
- Integrated Spring with Hibernate, facilitating seamless data interaction between the application and the database.
- Collaborated using Git and GitHub, applying version control best practices to support group collaboration and co-development.
- Developed RESTful web services using Spring MVC, providing scalable and flexible API endpoints for external integrations.
- Applied Spring framework features, including dependency injection, XML configuration, and annotations, to enhance the modularity and maintainability of the application.

CERTIFICATION: *Cornell University*

Python Programming:

Writing conditional statements and expressions, designing and testing functions, evaluating expressions, statement visualizations, implementing and designing of divide and conquer algorithms.

Working with Python objects and object visualization, multidimensional data, designing functions, function preconditions, docstrings and function definitions.

Using scripts to extract information. Reading CSV and JSON files, processing date time objects, building a python application package. Familiarity with Atom and Anaconda, small Linux knowledge. Querying a RESTful service

PROJECT: *Implementing a Currency Converter:*

Utilized python to work with a web service. Assembled tools needed for currency converter. Applied specifications and implemented a fully functional currency converter with over 171 currencies to convert and interchange.

EDUCATION:

BACHELOR OF SCIENCE: COMPUTER SCIENCE, FELICIAN UNIVERSITY

Completion: January 2021

Took courses involving programming logic and design, database, and game development. encouraged to collaborate with my peers in group projects. Some knowledge of Python concepts including data types, loops, if statements, range, min/max, append, insert, update, lists and tuple. Some SQL knowledge.

BACHELOR OF ART: FINE ARTS, FELICIAN UNIVERSITY

Completion: January 2021

Took courses involving figure drawing, life drawing, painting, web design, color and digital. Worked with several software including Photoshop, Dreamweaver and Clip Studio Paint.

SKILLS:

- Client-Side Technologies : HTML/CSS, React, JavaScript
- Sever-Side Technologies: REST, Apache Tomcat, Spring MVC, XML, Spring Boot
- Core Java
- Data Storage and Access: MySQL, Spring JPA, Sprint Data, Hibernate, JDBC, Git, GitHub, Maven
- Python, JSON
- Atom, Pycharm, Eclipse, IntelliJ
- Anaconda

SUMMARY:

Hardworking and reliable, with strong ability in Computer Science. Offering adaptability, critical thinking and communication. Highly organized, proactive and punctual with a positive mentality.
