SUMMARY

Data Analyst with 5+ years improving operational efficiency and business performance across logistics, healthcare, and e-commerce. Skilled in SQL, Python, Power BI, and Tableau with strengths in data modeling, KPI design, forecasting, and workflow optimization. Use Gen-AI and LLMs to accelerate SQL/Python development, generate test cases and data-quality checks, summarize stakeholder inputs, and draft first-pass forecasts to reduce cycle time and improve consistency.

EXPERIENCE

UPS | Data Analyst | New Jersey, US

Jul. 2024 - Present

- Leveraged SQL, Power BI, and Excel to extract, clean, and analyze logistics data, identifying delivery bottlenecks and improving on-time shipment performance by 15%
- Designed and maintained interactive dashboards that tracked KPIs for delivery routes, warehouse operations, and driver efficiency, enabling data-driven decision-making across regional hubs.
- Conducted root cause analysis on shipment delays and route deviations, providing actionable insights that reduced transportation costs by \$800K annually.
- Collaborated with cross-functional teams including Operations, Supply Chain, and IT to automate reporting workflows, reducing manual effort by 35%.
- Developed predictive models in Python to forecast delivery demand and optimize fleet utilization during peak periods, enhancing service reliability.
- Translated business needs into analytical requirements and presented data-driven recommendations to senior management to support continuous process improvement.

AMAZON | Business Analyst | Hyderabad, India

Aug. 2021 – Nov. 2023

- Utilized data-driven insights using SQL, Tableau, and Excel to identify operational inefficiencies, improving fulfillment center productivity by 18% and reducing delivery delays across regions.
- Partnered with Product, Operations, and Tech teams to translate business requirements into actionable dashboards, KPIs, and automated reporting pipelines, enabling leadership to make real-time decisions.
- Led root cause analysis on key performance deviations using statistical models and A/B testing, resulting in process improvements that saved \$1.2M annually in logistics costs.
- Developed forecasting models leveraging Python (Pandas, NumPy) to predict seasonal demand spikes, enhancing inventory accuracy and reducing out-of-stock rates by 12%.
- Streamlined data collection and visualization processes by automating manual reports, cutting analyst time spent on repetitive tasks by 40%.
- Acted as a bridge between business and technical teams, ensuring clear communication of KPIs, sprint priorities, and data validation for multiple cross-functional initiatives.

OPTUM | System Analyst | Hyderabad, India

Apr. 2020 – Jul. 2021

- Built reusable SQL datasets from Salesforce and underwriting tables. Standardized KPI definitions for cycle time, win rate, and P&L drivers to keep reporting consistent.
- Developed ETL on Python with Azure Databricks and Azure Data Factory. Ingested and validated source data, wrote PySpark transforms, and automated daily refresh and alerts.
- Designed Tableau dashboards and Excel trackers for pipeline health, meeting volume, and proposal turnaround. Documented metric logic and aligned refresh cadence with enterprise reporting.
- Migrated Excel RPT and P&L models into a scalable application workflow. Gathered requirements, validated calculations with underwriting and actuarial stakeholders, and supported GUI testing through UAT.
- Improved data quality and speed to insight by reducing reconciliation defects 35%, raising first-pass validation to 99.3%, and cutting dashboard refresh time from 30 to 10 minutes.

TECHNICAL SKILLS

- Languages & Frameworks:** Python, R, SQL, ABAP Open SQL, Flask, Django, HTML, CSS
- Data Engineering & Analytics:** PySpark, ETL, Data Modeling, Azure Databricks, Azure Data Factory, Delta Lake, Excel (Pivots, Power Query), Data validation and alerting design, Ad-hoc analysis
- Databases & Cloud:** Microsoft SQL Server, MySQL, PostgreSQL, MongoDB, Snowflake, NoSQL, Azure, AWS EC2, AWS S3, Terraform, Docker, Jenkins, Git, GitHub, CI/CD, Salesforce, SharePoint automation
- BI, Process, and Business Skills:** Tableau, Power BI, Power Automate, Power Apps, Celonis, Agile, GAP Analysis, KPI design and metric standardization, UAT and GUI testing, SAP SD/MM/Basis

EDUCATION

Adelphi University, New York, Master of Science in Business Analytics (MSBA)

Jan. 2024 – Aug. 2025
