

Sai Ram V | Senior Data Analyst

Fort Lauderdale, FL | Phone: +1 (502)-509-7689 | www.linkedin.com/in/sai-raam

Summary

Results-driven Data Analyst with over 7 years of experience across industries including Banking, Finance, Healthcare. Expertise in Power BI (Desktop, Pro, Premium), cloud technologies and Microsoft SQL Server, with a proven track record of transforming raw data into actionable insights and delivering high-impact reports and dashboards also Proven track record of building regulatory-compliant dashboards (SOX/FDIC, HIPAA), optimizing financial reporting, and delivering healthcare analytics for patient outcomes and operational efficiency. Skilled in end-to-end data solutions from ETL pipelines to interactive visualizations, with expertise in DAX, row-level security, and Agile collaboration to drive data-driven decision-making across industries.

Technical Skill

- **Database Management:** SQL, NoSQL, MS Excel, Oracle
- **Data Visualization:** Power-BI, Tableau
- **Programming:** Python, R, VBA, DAX
- **Data Analysis:** Machine Learning and Data Mining
- **Data modeling:** Statistics, A/B testing
- **Cloud computing:** Google Cloud Platform, Amazon Web-Services, Microsoft Azure, XML
- **Financial analysis:** Budgeting, forecasting, and BI
- **KPIs:** Reporting, dashboards, MS Visio
- **Software Development Life Cycle:** Agile, Waterfall
- **Project Management:** Scrum and Kanban
- **Human Resources Information System:** SPSS, Workday
- **Soft skills:** Communication and teamwork

Experience

HealthyMD — Coconut Creek, FL

May 2025 – Present

Data Analyst / Sr. Data Analyst

- Implemented **Databricks Workflows** (Jobs & DLT) with parameterized **PySpark/SQL** notebooks, modular transforms, and **data quality expectations** (null/dup checks, referential integrity) with automated failure alerts to Teams.
- Built an end-to-end **ELT pipeline on Azure**: ingesting Charm EHR & Halo CRM via REST/SFTP into **ADLS Gen2**, landing → cleansing → curated layers with **Delta Lake** (schema evolution, OPTIMIZE, Z-ORDER, file compaction).
- Orchestrated pipelines with **Fabric Data Factory/ADF**, including dependency chains, retries, and **SLA monitoring**; cut manual effort by ~40% and stabilized refreshes for executive reporting.
- Enforced governance via **Unity Catalog** (RBAC, row-/column-level controls), **PII masking/tokenization**, and audit logging; aligned processes to **HIPAA** controls for PHI handling
- Tuned Databricks performance using **Photon**, adaptive execution, broadcast joins, and partition pruning; reduced cost/run by ~30% and improved daily refresh time by ~35%.
- Published a **Lakehouse** → **Power BI** semantic layer with incremental refresh, role security, and certified datasets to support clinical & operations dashboards (encounters, prescriptions, facility performance).
- Set up **CI/CD** with Git-backed repos and environment branches (dev/test/prod), plus **Power BI Deployment Pipelines** for controlled releases and rollback.
- Implemented **observability** (run history, data drift/volume checks, freshness SLAs) and created runbooks/playbooks for on-call resolution and continuous improvement.
- Authored a concise **visual/KPI dictionary** so non-technical stakeholders can validate definitions quickly and request changes with traceability.

Tech: Azure Databricks, Delta Lake, Unity Catalog, PySpark, SQL, Fabric Data Factory/ADF, ADLS Gen2, Power BI (DAX, Dataflows, Deployment Pipelines), Git, Python

Client: First Citizens Bank, Louisville, KY

May2024 – May2025

Role: Sr. Power BI Developer/Data Analyst

Responsibilities

- **Optimized** 15+ financial dashboards in Power BI using **DAX measures** and **SQL stored procedures**, **reducing** monthly report generation time by **35%** for CFO/COO reviews.
(Metrics: Dashboards built, hours saved per report, stakeholder adoption rate)
- **Designed** a **dynamic loan portfolio dashboard** with **drill-through DAX metrics**, enabling lenders to **identify** high-risk accounts 50% faster and **reduce** NPLs (non-performing loans) by **18%**.
(Metrics: NPL reduction %, risk assessment time, user logins/week)
- **Led** SQL Server **indexing overhaul** for core banking tables, **slashing** query runtime by **40%** and **saving** \$12K/month in cloud compute costs.
(Metrics: Query performance gain, cost savings, data volume processed)
- **Implemented** complex **DAX expressions, embedded queries, measures, and relationships** to enable dynamic user-driven filtering in financial dashboards, **improving** stakeholder self-service by 40%.
(Metrics: DAX measures built, user adoption rate, filter responsiveness)
- **Installed/configured** **Enterprise + Personal gateways in Power BI Service**, ensuring secure, real-time data refresh for 10+ critical banking reports. (Metrics: Gateway uptime %, reports automated, refresh time reduced)
- **Created/managed** **Power BI Workspaces + Dataflows**, centralizing 15+ data sources for cross-team collaboration

while **reducing** redundancy by 30%. *(Metrics: Data sources integrated, workspace usage stats)*

- **Enforced Row-Level Security (RLS) + restricted sharing/export**, achieving **100% compliance** with FDIC data privacy standards for loan portfolios.
- **Developed optimized SQL queries + indexing strategies**, **cutting** query execution time by **40%** for monthly financial close processes.
- **Designed interactive Power BI dashboards with dynamic DAX**, enabling real-time tracking of **ACH transactions** and **NPL (non-performing loan) trends**. *(Metrics: Dashboards built, user logins/week, decision speed gain)*
- **Built ETL pipelines (SSIS) + advanced SQL techniques** (CTEs/window functions), **automating** 20+ manual workflows for SEC/financial reporting.
- **Goal:** To track daily banking transactions, monitor business performance and analyze customer profitability across various segments, loan categories, and geographic regions. This project aimed to provide real-time insights through interactive Power BI dashboards, enabling stakeholders to identify growth opportunities, evaluate revenue channels, and make data-driven decisions.
- **Tool & Environment:** Power BI Desktop, Power BI Service, Power BI Mobile App, Enterprise and Personal Data Gateway, SQL Server, Power Query, DAX, T-SQL, MS Excel, Power BI Dataflows, XMLA, SQL Profiler

Client: IDB Bank, Elizabeth town, KY

Dec 2023 - May2024

Data Analyst

Responsibilities

- **Architected a regulatory compliance dashboard** in Power BI with **row-level security (RLS)**, ensuring 100% audit readiness for FDIC/FRB examinations.
(Metrics: Audit pass rate, compliance violations prevented, RLS roles configured)
- **Streamlined** deposit growth analysis by **merging** 8+ SQL data sources into a **single Power BI dataset**, enabling branch managers to **track** customer acquisition KPIs 60% faster.
(Metrics: Data sources consolidated, report runtime reduction, user adoption)
- **Developed a profitability heatmap** in Power BI (DAX + GeoJSON), **revealing** 22% untapped revenue in Midwest SME banking segments.
(Metrics: Revenue opportunity identified, new accounts opened, regional growth %)
- **Pioneered an ETL pipeline** (SSIS + Power Query) to automate daily ACH transaction reconciliations, **cutting** ops team manual effort by **25 hours/week**.
(Metrics: Transactions processed/day, errors reduced, labour hours saved)
- **Implemented 15+ complex DAX measures and query relationships** to enable dynamic user filtering, **reducing** ad-hoc report requests by **35%**.
(Metric options: Measures built, user self-service rate, report automation %)
- **Deployed Enterprise + Personal gateways**, ensuring **99.9% uptime** for real-time data refreshes across 10+ critical financial dashboards.
(Metric options: Gateway uptime %, refresh cycles automated)
- **Centralized 8+ data sources into Power BI Dataflows**, **eliminating** 20 hours/month of manual data prep for FP&A teams.
(Metric options: Data sources integrated, time saved, redundancy reduced)
- **Enforced Row-Level Security (RLS) + publishing restrictions**, achieving **100% compliance** with SOX audit requirements for financial data.
(Metric options: RLS roles configured, audit pass rate, security incidents prevented)
- **Designed 20+ interactive dashboards** with drill-through KPIs (e.g., **NPL tracking, ACH volumes**), **accelerating** monthly close reviews by **25%**.
(Metric options: Dashboards built, decision speed gain, user adoption)
- **Automated UAT deployment pipelines**, **reducing** Power BI report QA cycles from **5 days to 1 day**.
(Metric options: Testing time saved, deployment frequency)
- **Optimized 50+ M queries in Power Query Editor** (merges, pivots, error handling), **improving** dataset refresh reliability by **40%**.
(Metric options: Refresh success rate, error reduction)
- **Goal:** To develop and deploy interactive Power BI dashboards that provide real-time insights by transforming and modeling data from multiple sources. The project aimed to enhance data accessibility, ensure compliance with data privacy and security standards, and support business decision-making through advanced DAX calculations, row-level security, and intuitive visualizations.
- **Tool & Environment:** Power BI Desktop, Power BI Service, Data Gateway, SQL Server 2019, DAX, T-SQL, SQL Profiler, XMLA, MS Excel.

Client: Apik InfoTech IN

Oct 2021 – Aug 2023

Role: Sr Data Analyst

Responsibilities

- **Interpreted business requirements** from JRD sessions and translated them into **technical specifications** for KPI tracking, customer segmentation, and campaign performance dashboards.
- **Developed automated SQL stored procedures and triggers** to streamline **sales pipeline data processing**, reducing manual reporting effort by **40%**.
- **Designed high-performance database tables** with **clustered/non-clustered indexes** and **complex joins**, optimizing query speeds for large-scale marketing datasets (**10M+ records**).
- **Built 10+ interactive Power BI dashboards** with **DAX measures** and **time-series analysis** to track **customer acquisition costs (CAC)**, **ROI**, and **lead conversion rates** in real time.
- **Implemented Row-Level Security (RLS)** in Power BI to **restrict access to regional sales data**, ensuring compliance with **client data governance policies**.
- **Automated ETL pipelines (SSIS)** to consolidate **multi-channel marketing data** (CRM, Google Ads, social media), improving **campaign attribution accuracy** by **30%**.
- **Created dynamic Power BI templates** with **parameter-driven filters**, enabling sales teams to self-serve **region/product-level performance reports**.
- **Deployed dashboards to Power BI Service** with **automated subscriptions**, ensuring stakeholders received **weekly performance snapshots**.
- **Created Power BI template files** and gave input parameters to the file for filtering the entire report accordingly.
- **Provided subscriptions** for dashboards in Power BI Service.
- **Goal:** To design and implement automated data reporting solutions that transform raw business data into actionable insights. The project focused on optimizing data retrieval through SQL automation, enhancing data visualization with Power BI dashboards, and ensuring secure data access using dynamic Row-Level Security. The aim was to facilitate informed decision-making by providing

accurate, real-time business intelligence across diverse user groups.

- **Tool & Environment:** Power BI Desktop, Power BI Service, Data Gateway, MS SQL Server 2019, DAX, T SQL, Advanced Excel

Client: Merck IN

Jan 2020 – Oct 2021

Role: Power BI Developer

Responsibilities

- **Analyzed large datasets** using SQL and Power BI to deliver actionable insights on drug efficacy, patient outcomes, and financial performance across pharmaceutical sales and clinical trials. Improved reporting efficiency by 35% through advanced SQL querying, helping streamline decision-making for product development and market strategies.
- **Led the AWS Redshift migration** from on-premises pharmaceutical data systems, reducing data storage costs by 40% and improving query performance by 30% through optimized ETL processes, enabling faster access to critical clinical trial data and drug performance insights.
- **Designed Power BI dashboards** for real-time analysis of pharmaceutical operations, enabling business leaders to track drug development stages, clinical trial progress, and market sales metrics, resulting in 30% faster decision-making for product launch and market penetration strategies.
- **Built and maintained a unified data model** by integrating multiple data sources (clinical trial data, regulatory data, sales data) using SQL and Power BI, improving data accessibility across departments and teams, facilitating better collaboration for drug approval and distribution.
- **Conducted advanced trend analysis** using DAX in Power BI to identify market trends and treatment efficacy patterns, supporting targeted marketing and product development strategies that increased market share and patient access by 20%.
- **Enhanced data quality** by implementing automated validation processes using Python and SQL, reducing data errors by 25% and improving the accuracy of regulatory reporting and clinical trial analysis.
- **Worked cross-functionally** with pharmaceutical teams to gather business requirements and deliver custom Power BI reports, providing key insights for drug development, clinical trials, and financial forecasting projects.
- **Participated in Agile workflows**, collaborating on sprint planning and ensuring newly developed analytical solutions met functional, regulatory, and accuracy standards, aligning with healthcare and pharmaceutical objectives.
- **Goal:** To leverage advanced data analytics and BI solutions to drive informed decision-making across pharmaceutical operations, including drug development, clinical trials, and market strategy. By integrating data from multiple sources, optimizing ETL processes, and utilizing tools like Power BI and AWS Redshift, the aim is to improve reporting efficiency, reduce costs, enhance data accuracy, and support market growth.
- **Tools & Environment:** Power BI Desktop, Power BI Service, Data Gateway, MS SQL Server 2018/19, DAX, Python.

Client: Karvy Financial

June 2018 – Dec 2019

Role: Data Analyst

Responsibilities

- Assisted in developing Power BI dashboards for financial reporting and client lifecycle tracking.
- Supported automation of data extraction and reporting, improving order tracking efficiency enhancing revenue insights.
- Conducted basic financial and inventory analysis using SQL and SAP to optimize stock management.
- Helped improve forecasting accuracy with time-series analysis in Power BI and SQL.
- Assisted in data migration to SAP, ensuring seamless integration of financial data.
- Provided support for Power BI training, enabling self-service financial reporting.
- Assisted in integrating Power BI with SQL databases for financial performance tracking.

Tool & Environment T-SQL, SQL Server 2014, DB2, Visual Studio 2014, XML, MS Office and Visual, MS Excel, and MS Visio.

Education

BACHELOR IN INFORMATION TECHNOLOGY, SRM UNIVERSITY MASTERS
IN BUSINESS ANALYTICS UNIVERSITY OF LOUISVILLE

Certifications

PL-300 (Power BI Analyst), Associate SQL Developer (Data-camp), Google Analytics, Advanced RPA Developer
