

Sree Teja Reddy Chappidi

+1 (561) 414 0581 | schappidi2024@fau.edu | <https://www.linkedin.com/in/sree-teja-reddy-chappidi-b928782a9>

PROFESSIONAL SUMMARY

Data Insights Analyst and AI enthusiastic with experience in data analytics, AI/ML, and data engineering, delivering actionable insights across blockchain and retail domains. Proficient in Python, SQL, Power BI, Tableau, AWS, and ML frameworks for designing predictive models, ETL pipelines, and interactive dashboards. Demonstrated success in analyzing 100k blockchain transactions and 1TB+ sales data, improving fraud detection accuracy by 42% and sales forecast accuracy by 28%. Skilled in NLP, anomaly detection, demand forecasting, and A/B testing, enabling data-driven decision-making and process optimization. Strong collaborator with experience in mentoring teams, defining KPIs, and deploying scalable analytics solutions that enhance business performance.

EDUCATION

Masters in Data Science and Analytics <i>Florida Atlantic University</i>	Dec 2025
Bachelors in Bio-Medical Engineering <i>Saveetha School of Engineering (SIMATS)</i>	Jul 2023

EXPERIENCE

H.U.G. Program <i>Data / IT & Avochato Communications Intern</i>	May 2025 – Dec 2025
--	----------------------------

- Analyzed **100K+** SMS records using **Excel**, **Salesforce Dashboards**, and **AWS QuickSight** to generate **15%** engagement improvement insights.
- Built **10+** BI dashboards tracking **3+** KPIs, reducing reporting time by **40%** across teams.
- Cleaned **50K+** contact records in **Zoho CRM**, improving segmentation accuracy by **25%** with **100%** compliance.
- Integrated **Avochato** messaging data using **SQL**, increasing real-time campaign visibility by **30%**.
- Optimized **SQL** data pipelines across **5+** datasets, improving query performance by **20%**.
- Performed **EDA** on **100K+** records, identifying behavioral patterns across **5+** segments.
- Engineered ML-ready features from **3+** data sources, enabling **15%** predictive modeling lift.

Club Vice President <i>H.U.G. Program (Remote) Club, Florida Atlantic University</i>	Sep 2025 – Dec 2025
--	----------------------------

- Key Achievements:**
- Guided 15+ students by assessing their skills and connecting them with relevant internship opportunities.
 - Organized awareness programs to promote reading initiatives and academic development
 - Successfully recruited and managed a team of tutors, improving academic performance for underperforming students.
 - Acted as a liaison between students and external organizations to enhance career growth opportunities.

SKILLS

- Incident Management & IT Operations:** ServiceNow, Jira, BMC Remedy, ITIL, Agile, Scrum, Windows Server (2012–2019), Linux/Unix (RHEL 8, CentOS 8), Microsoft 365 Suite, Active Directory.
- Version Control & CI/CD:** Git, GitHub
- Data Analysis, Visualization:** Python (Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib), Shell Scripting, Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Visualization: Grafana, Kibana, Tableau (if applicable), Basic Machine Learning concepts and frameworks (Scikit-learn, TensorFlow, PyTorch).
- LLM & RAG Tools:** Ollama, FAISS, Chroma, LangChain, Prompt Engineering, Local & Cloud LLM Deployment
- Monitoring Tools:** Grafana, Kibana, Alert creation, refinement, noise reduction.
- Data Modeling & Database Skills:** ERD Design, Dimensional Modeling (Star/Snowflake Schemas), Data Normalization, Relational & Non- Relational Databases (PostgreSQL, MySQL, MongoDB)

PROJECTS

Blockchain Fraud Detection System (Python, Scikit-learn, TensorFlow, SQL, AWS Glue)

- Developed AI-driven data models analyzing 100k+ blockchain transactions, improving fraud detection accuracy by 42%.
- Built predictive wallet-behavior models using XGBoost and TensorFlow, increasing user retention prediction accuracy by 37%.

Token Performance & Liquidity Analytics Dashboard (Power BI, Tableau, Snowflake, SQL)

- Created interactive dashboards in Power BI and Tableau, enhancing executive reporting speed by 45%.
- Defined on-chain KPIs with teams, improving data transparency across decentralized apps by 50%.

Automated Model Retraining Pipeline (Airflow, Python, AWS Lambda)

- Automated ML model retraining and feature engineering workflows using Airflow, decreasing manual maintenance by 60%.
- Configured AWS Lambda triggers for continuous ingestion and retraining, enabling real-time model updates.

DocuRAG System (Ollama, FAISS, Python)

- Developed a DocuRAG system using Ollama + FAISS with chunked documents embeddings.
- Delivered ~70% accuracy with ~10s response latency using local LLM inference.
- Managed LLM execution through python subprocess orchestration.

AI Fitness Tracker (OpenCV, Pose Estimation, ML)

- Developed a AI-based system for real-time fitness tracking, detecting repetitions.
- Built a live OpenCV-based fitness tracking system using pose estimation.
- Processing webcam video at ~20–25 FPS with ~85% repetition counting accuracy across 6+ exercise types.
- Detected posture deviations in real time using ML-based motion analysis and delivered instant corrective feedback.
